These easy to install kits allow the boiler flue outlet to be extended, external to the building, upwards to provide a flue exit at high level, overcoming problems associated with plume emission.

An external 60mm diameter flue leads from the boiler terminal (simply replacing the standard flue terminal 'nose') to terminate with a 90° elbow complete with grille. Push fit one metre extension pipes are used as required, and the fixing clips supplied support the system from the wall. Both 90° and 45° elbows are available to provide routing options.
