EASYGrid

Strong, quick and easy to install ground interlocking reinforcement grid - ideal for shed bases, driveways, car spaces, equine turnout and so much more...

Key benefits

- Versatile interlocking base
- Suitable for any areas needing ground or grass protection
- Infill with gravel, sand, soil or grass
- Filled EASYGrid will support up to 397 tonnes per square metre
- Soil erosion prevention
- Eco-friendly and lightweight
- Quick and easy to install
- Lightweight, slip resistant, crack proof, frost and UV resistant
- Fully recyclable
- Maintenance free

**Strong,
quick
and easy
to lay**

Each 1m² of **EASYGrid** is made up from nine 33cm squares

Supports up to 397 tonnes per m² filled with aggregate

Available in Black,
White and Green

EASYGrid

Ground Reinforcement Grids ideal for:

- Car Parks - permanent and temporary
- Construction Sites
- Private Roads
- Driveways
- Footpaths and Walkways
- Wheelchair Access Routes
- Emergency Vehicle Access Routes
- Residential Parking
- Tow Paths
- Golf Course Paths
- Cycle Paths
- Aircraft Parking
- Helipads
- Green Roofing
- Hardstandings for Sheds, Outbuildings and Caravans
- Festival Sites and Showgrounds
- Outdoor Attractions
- Farms and Agricultural Areas
- Grass Parking Areas
- Campsites
- Playgrounds
- Grass-Seeded Areas and Green Spaces
- Stables, Paddocks and Riding Arenas
- Embankment Stabilisation
- And much more

EASYGrid

Ground Preparation/Installation Guidelines

Preparation

Some excavation of the existing ground may be required to obtain a level surface. A suitable geotextile layer should be laid to increase ground stability and prevent particle migration. A suitable sub-base should be installed where necessary*. Before laying EASYGrid ensure site drainage is adequate.

*vehicular parking or thoroughfare, helipad etc.

Laying

Lay the pavers starting in the corner of the site. The lugs on the edge of the pavers should face the direction of installation. Offer the next panel in the same orientation so that the slots slide on to the lugs on the previous panel. Continue laying pavers in the desired direction, standing on the laid pavers when laying the next panel.

Where stone/gravel finish is required

A suitable geotextile should be laid on top of the sub-base to act as a separating layer/weed suppressant. The laid EASYGrid can be filled with your chosen aggregate.

Where a grassed finish is required

Fill the EASYGrid with topsoil. This can then be seeded or turfed. (turf may need compressing into the grid to maintain a level surface)

White delineators are available for marking out parking spaces or walkways.

Important: the performance of EASYGrid as a driveway or parking area is dependent on the quality of the sub-base installation. The ground under the grid must be able to withstand the forces put upon it. EASYGrid acts a ground stabiliser and gravel containment product. When installed correctly it will aid weight distribution and reduce rolling and rutting caused by vehicles.

All colours of EASYGrid are recyclable, and our black EASYGrid is made of 100% recycled plastic."

Product Specifications

Colour	Black, White or Green
Module Size	33.3cm x 33.3cm
Module Depth	40mm
Wall Thickness	3.2mm min.
Module Weight	500g
Modules/m ²	9
M ² /pallet	50
Cell Size	7cm x 7cm
Axle Weight	14 tonnes
Load Bearing	Up to 397 tonnes/m ² filled with aggregate
Temperature range	-50°c to 65°c
Chemical resistance	Sodium chloride, ammonia, acid rain and petroleum products
Installation times	120m ² /man per hour (depending on ground conditions)

EASYGrid
is ideal for
campsites, children's
play areas, garden
paths and much
more!

EASYDelineators

- Designed to guide traffic into a specific lane, space or area
- Easy to fit with EASYGrid

**Mark out
car park bays,
pathways
and lots
more!**
