Decking Balustrades – made to last

Regulations & Standards

All of our systems have been independently tested to conform with all the relevant Building Regulations in the UK. The systems all conform to BS6399 – Part 1 1966, Loadings for Buildings, our systems all conform to the latest EU standards. You can be certain when you install or specify Cheshire Moulding Balustrade systems they conform to all the latest standards – for full details please see our trade brochure or website.

Cheshire Moulding are also proud to be full members of the Timber Decking and Cladding Association. This organisation gives expert advice and guidance to ensure high quality decking and associated structures. Our products are also Deck-Mark and Deck-Mark Plus certified to ensure we comply with the latest ISO guidelines.

Cheshire Mouldings also fully support and are able to supply FSC® certified products from responsibly managed forests. We are also able supply PEFC certified products from sustainable forests. Details of which products are certified under each scheme are listed in this brochure. We use FIRA to test our products to the relevant standards.

Timber Pre Treatments

Softwood outdoor balustrade components are treated to make them last for 15 years. They are pressure treated with Celcure AC - 500. Initially, this has a green appearance, but it weathers to a honey brown before eventually fading to grey. It can be painted or stained to match any outdoor colour scheme.

Treatment & Maintenance

All balustrade components should be treated annually with a seal, stain or oil treatment. For all balustrade components, hardwood or softwood, follow carefully the seal, stain or oil recommendations of the manufacturer and test on an off-cut or hidden surface.

Use a cloth, slightly heated water and a mild detergent for items such as glass and alloy posts or rails. Do not polish or employ abrasive cleaners and scourers.

Softwood

As standard, timber decking materials from Cheshire Mouldings are made from softwood Scots Pine. There is a natural tendency as the timber weathers for there to be minor surface checking and splitting, caused by the variation in moisture content and the effects of wetting and drying out. These surface defects do not harm the decking structure.

As with balustrades, decking should have a proprietary clear water repellent, semi-transparent seal or decking oil applied, for the sake of protection and enhancement. Make sure that the decking is dry before you start. Test by sprinkling drops of water over the surface and if the wood does not absorb the moisture let it dry out and retest before carrying out the work.

Note that newly-laid decking should not have any finish applied until it has weathered properly.

Add an end-seal preservative to any surface that has been exposed by drilling or cutting.

FSC® certified products available upon request.

Cheshire Mouldings Trade don't just have an outstanding range of Decking and Porches, but also offer market leading products in the following areas:
