

Gate & Fencing

ACCESSORIES

2014-15
PRODUCT CATALOGUE

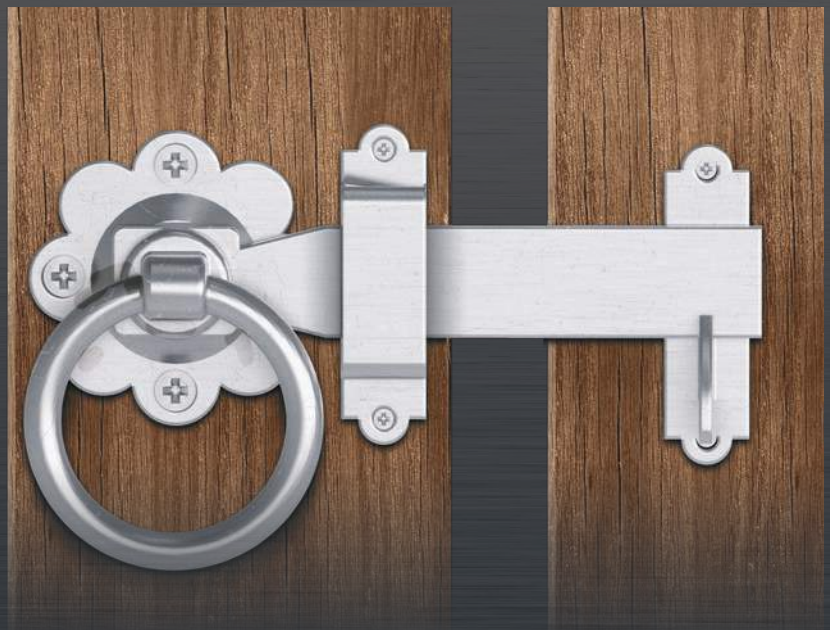

welcome

to our latest gate, door
and fencing accessories
catalogue.

IT'S OUR JOB TO MAKE YOURS EASIER

Our mission is simple: to provide our customers with the best products and expert advice, backed up by unrivalled service standards and unbeatable value. Because we have a massive product range, you can be assured that you'll find all the specialist gate, door and fencing accessories you'll ever need, at the right quality for the job, all in one place. Our ever-growing and evolving product range ensures our customers have the right products for the job, large or small, whatever demands you may be facing. From simple hinges to

sophisticated security products, everything has been selected or developed specifically for the trade, to exacting standards. Quality always comes first.

NO QUIBBLES

All our products are guaranteed to be robust, reliable and durable. Everything has been stringently vetted, and only the best products make it into our range. Our commitment to 100% customer satisfaction is backed up by a 90 day, no quibble, money-back guarantee on everything.

We Strive to be Good to the Environment

GREEN POLICY

We do all we can to minimise our environmental impact and to promote

responsible environmental practice including sustainable agriculture and forestry management. This commitment is reflected through our production processes and includes energy efficiency, minimising packaging, water usage, waste disposal and air emissions.

RAZOR SPIKE

PAGE | 177

Features

- Heavily ribbed for strength
- Hot dip galvanised against corrosion
- Virtually impossible to climb over
- Double row of barbed wall spikes
- Easy to install
- Maintenance free

This is an aggressive ant-climb wall spike; to be attached to gates and fences, perimeter walls and building roofs

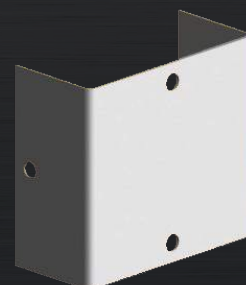

Galvanised: galvanising is the process of applying a coating of zinc to steel. In this catalogue when 'galvanised' is stated, this refers to a hot dip galvanised finish (approximately 60 microns), which means the product is dipped in molten zinc to coat every part of the product. The actual finish on the product is a thick, rough coating but it has great advantages as this creates a long term corrosion resistance.

E-galvanised/BZP (Bright Zinc Plated)/Zinc plated: e-galvanised (electro galvanised) is the electroplating of zinc onto steel; this means the coating is a thin (6-8 microns), smooth, shiny finish, which makes it a more attractive product. However, the coating is not as corrosion resistant as a hot dip galvanised finish, as the coating is so much thinner.

Pre-galvanised: product is fabricated from pre-galvanised sheet steel; thickness of the finish is approximately 20 microns, the corrosion resistance is between that of hot dip galvanising and electro galvanising.

Your Guide to Our Ironmongery Finishes

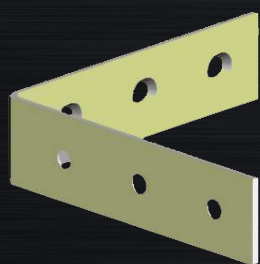

E-black/E-brown:

this is a polyester powder coating that is baked or sprayed onto the metal; if it is a wearing part, the coating can flake and the exposed steel may be subject to corrosion.

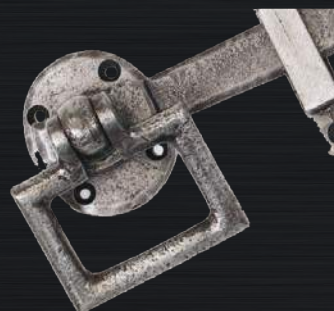

Stainless

steel: 316 marine grade stainless steel is corrosion free for coastal and high performance situations.

BZP/Yellow passivated: this is an electro galvanised finish with an additional yellow passivation; this layer increases the corrosion protection of the parts of the product and gives it a slight yellow finish.

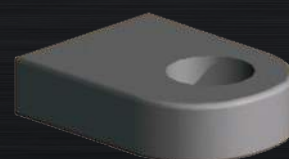

Premium black: this is a hot dip galvanised finish with black polyester powder coating baked on top; this gives a highly durable finish, double corrosion protection.

Pewter: zinc coating is applied, then a pewter finish and finally a clear lacquer to seal the finish. It beautifully highlights the texture of the steel, however regular maintenance is required (wiping it with an oily rag) to keep it in good condition.

Self colour: unfinished steel – this is generally for use in fabrication; exposed to the elements it will rust within hours!

01 post caps & finials

GATEMATE®

...giving you the ability to fit your
doors, gates and fences, with
everything at your fingertips!

Discover one of the largest ranges of pre-packed door and gate furniture, supplied complete with all the screws and fixings you'll need, in handy, well-labelled polythene sleeves... and all from one supplier: how easy is that?

- **Ideal for all your needs...** from simple bolts and hinges to complete gate kits, specialist fixings and ornamental ironmongery; there's genuinely something for every job!
- **Straightforward and convenient...** pre-packed complete with the right type and number of fixings, GateMate® door and gate furniture is easy to understand and easy to use.
- **Always competitively priced...** because we believe you deserve excellent value for money all the time, not just in today's tough economic climate.
- **Quality, reliability and durability, guaranteed...** the best materials, the best designs, the best manufacturing: we may offer competitive prices, but we don't compromise on quality.
- **For future stockists...** we recommend this range is displayed on our purpose made GateMate merchandisers which are available free of charge

SITEMATE®

SM700 Electric Spray Gun, suitable for stain and paint up to 60 DIN-S viscosity

The SM700 Spray Gun is the ideal tool for applying following materials:
solvents and water based paints and stains, varnishes, primers, automotive
paints and wood preservatives.

- Powerful 700w motor supplies constant flow
- Adjustable flow rate regulator
- Adjustable nozzle provides three different types of spray patterns
- Adjustable shoulder strap
- Two year warranty

Specifications

Max viscosity:	60 DIN-S
Voltage:	22-240v, AC 50 Hz
Power Output:	700w
Max Back Air Pressure:	0.1-0.3 bar
Sound Pressure Level:	79.2 dB(A)
Osculation Level:	0.154 m/s ²
Air Hose Length:	1.8 m
Container Capacity:	1200ml
Nozzle Size:	ø 2.5mm
Weight:	2.5kg

Quality Gate Hinges - Made to last

TRU•CLOSE® safety gate hinges are injection-moulded from super strong, UV-stabilised glass-fibre reinforced materials for many years of reliable and rust-free performance.

Gates of different sizes and weights incur different loads, so the ability to adjust tension quickly is critical, especially in child safety areas. The unique, spring-loaded adjuster in **TRU•CLOSE®** hinges allows quick, incremental tension adjustment using only a screwdriver - it's so easy!

TRU•CLOSE® hinge range features a variety of sizes and design, as well as **Regular** and extra-strong **Heavy Duty** models for larger gates and high-traffic applications - all your options are covered!

Patura Electric Fencing

...one of the best
electric fencing
systems in the World

Contact us to
find out more
about the range

When you invest in electric fencing, you'll want to be sure you can depend on it, without question, without fail - whether it's to keep animals in or to keep them out!

Already the "system of choice" across Continental Europe, Patura is a respected brand with an enviable reputation for practical, efficient yet innovative products.

WHATEVER YOU NEED...

Fencing for cattle, sheep, goats, pigs, poultry, wild or domestic animals and equestrian uses, you can choose exactly the right options, specifically developed for the job.

VIRTUALLY MAINTENANCE-FREE PERMANENT FENCING...

Choose from steel wire, polywire, polyrope or polytape to achieve the right mix of durability, visibility and conductivity.

QUICK AND EASY TEMPORARY SOLUTIONS...

You could fence a hectare in under an hour - that's fast! - and we even have portable overnight trekking options.

THE RIGHT POWER, GUARANTEED...

Mains, battery or environmentally-friendly solar powered units; multi-function, multi-voltage and even remote control! Thankfully they're all easy to operate.

CONTROL AT YOUR FINGERTIPS...

With state-of-the-art insulators, earthing, monitoring and fault detection, you can be sure your electric fencing will be reliable, safe and as economical as possible.

Combining the latest technologies and materials with guaranteed quality, reliability and durability, plus German attention to detail from the acknowledged experts in electric fencing.

PATURA WON'T LET YOU DOWN, GUARANTEED.

How to fit a rising hinge set (0346001)

This kit is designed for minimum post size of 125mm and only for gates hung between the posts.

Approximate rise 75mm per metre width of gate, when gate opens at 90 degrees.

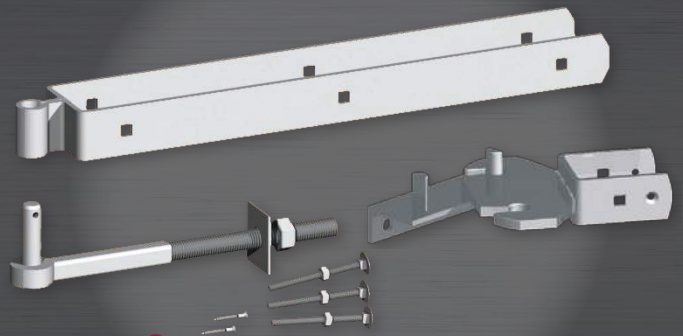

This rising hinge set includes:

- 24" x 2" x 1/4" top band
- 13" hook to bolt
- Bottom band
- Rocker plate
- Fixings to suit

ILLUSTRATION SHOWS:

- Rising Hinge Set
- code 034 600 1

PAGE 45

Method:

1. Offer up the 600mm top band to top rail of gate and mark position of the three boltholes on each side.
2. Drill approximately halfway through the top rail on both sides and holes should meet in the middle.
3. Feed the coach bolts through and tighten.
4. Repeat the above three steps to fit the lower rocker plate.
5. Decide where the gate should hang on the post and mark the position of the top bolt.
6. Drill the gatepost through for the hook to bolt with a 20mm drill bit.
7. Hang the gate on the hook to bolt, supporting the underside of the gate until the bottom hinge is fitted.
8. Attach the bottom hinge to the gatepost, pins facing down. Remember to ensure a 5-10mm gap between the profiled lower double strap band and the plate with double pins. This allows the gate to rise on the hinges when the gate is opened.

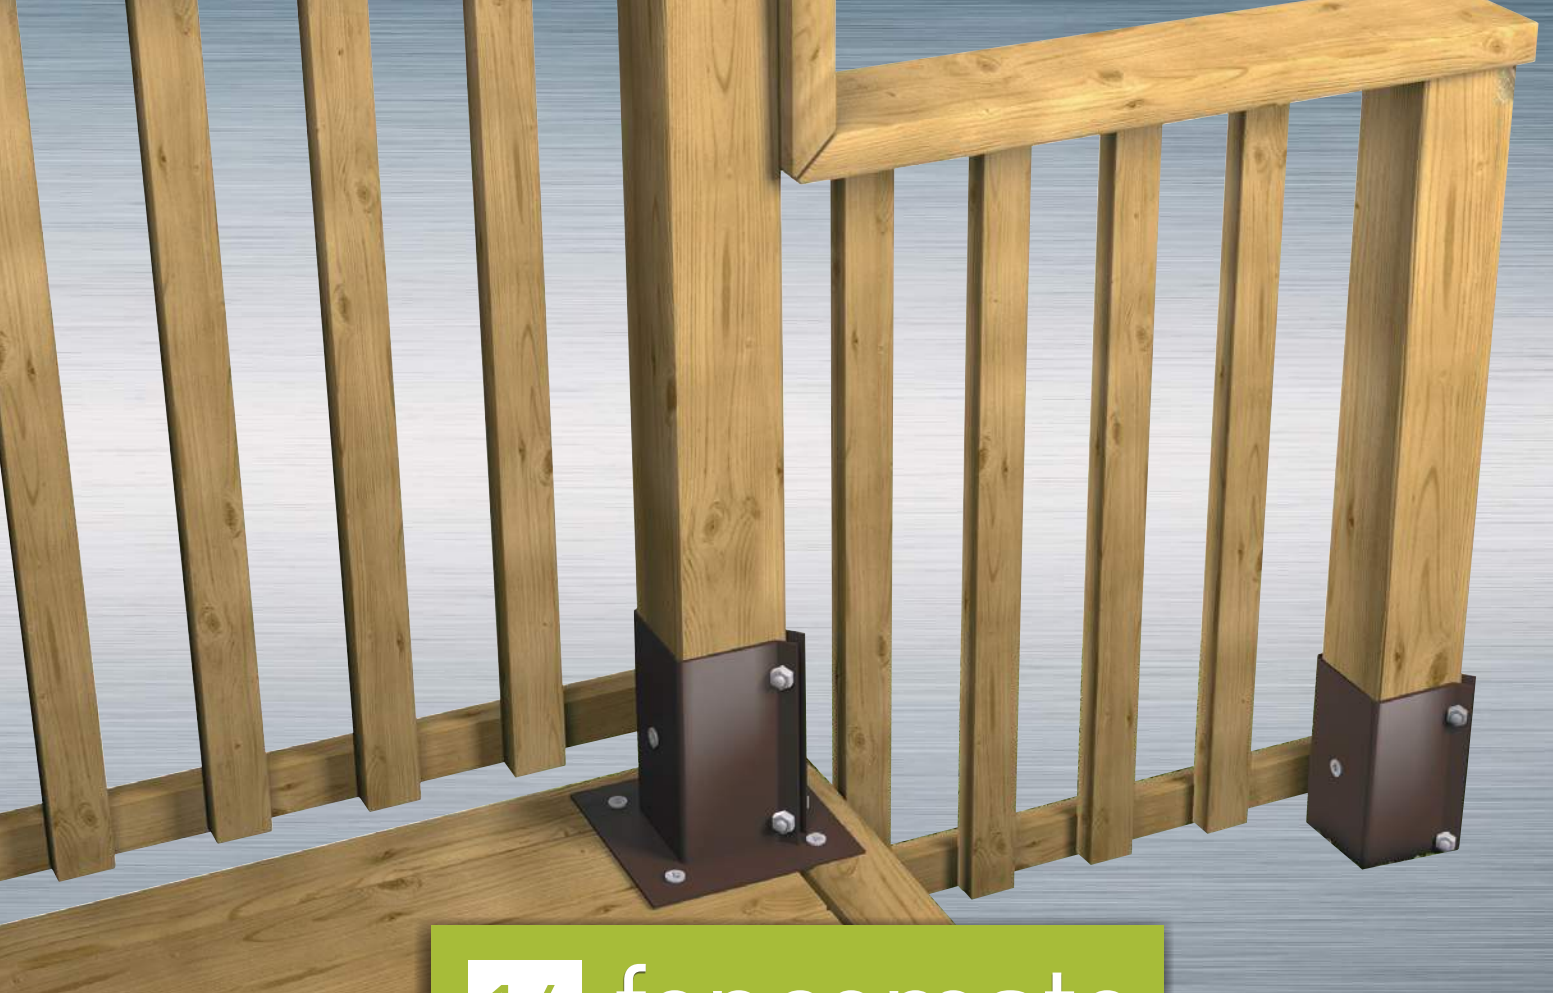

ILLUSTRATION SHOWS:
Gate Closed

ILLUSTRATION SHOWS:
Gate Open

TIP: TO INCREASE GATE RISE REDUCE DISTANCE BETWEEN TOP AND BOTTOM HINGE.

SWIFT CLAMP™ AND HOLD FAST™ DRIVE IN POST SUPPORT

All items in the Fencemate Post Support range can be ordered along with your normal Ironmongery order.

These supports are suitable for most ground conditions and the wide range of sizes fit all common timber posts. Robust construction ensures they will drive into very hard ground with ease and the effective clamp system will hold the post securely in the socket.

Suitable for fence posts, decking, pergolas, gazebos, carports, bird tables and much more.

SWIFT CLAMP™ AND HOLD FAST™ BOLT DOWN POST SUPPORT

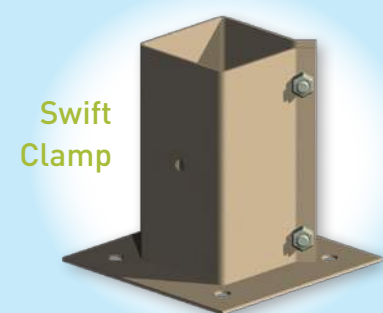

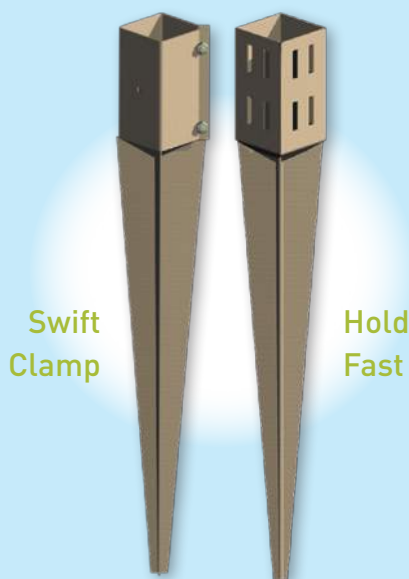

These supports are designed for fixing posts to any hard surface that will accept fixings such as concrete bases, timber decking or walls. Robust construction and the effective clamp system ensure posts are securely supported. Available with flush sides for fixing directly next to a vertical surface.

Suitable for fencing, decking, car ports and fixing to walls. Domestic and light commercial use only.

SWIFT CLAMP™ CONCRETE IN POST SUPPORT

This support is designed for use where conditions prevent the use of the Drive in Post Support such as very stoney or loose ground or areas of hardstanding. The effective clamp system will hold the post securely in the socket.

Suitable for fencing, decking, and carports.

PRODUCT CODE	POST SIZE INS (MM)	QTY PER BOX	FINISH
263 0753	3"x 3" (75x75)	10	E-Brown
263 1003	4 x 4" (100x100)	10	E-Brown

263 1001	4"x 4" (100x100)	10	S/Galv

SWIFT CLAMP™ REPAIR SPUR

This support makes light work of replacing a rotten timber post in a sound concrete base. The repair spur drives between the old timber and the concrete base to provide a secure post support without the need to disturb the concrete base. The effective clamp system ensures posts are securely held in the socket.

PRODUCT CODE	POST SIZE INS (MM)	QTY PER BOX	FINISH
261 0753	3"x 3" (75x75)	10	E-Brown
261 1003	4"x 4" (100x100)	10	E-Brown

261 1001	4"x 4" (100x100)	10	S/Galv

SWIFT CLAMP™ WALL MOUNT POST SUPPORT

This support is specifically designed for securing posts to the top of concrete or brick walls. The effective clamp system will hold the post securely in the socket.

Suitable for trellis or fencing up to 1.2m high.

Note: check structural condition before fixing commences.

PRODUCT CODE	POST SIZE INS (MM)	QTY PER BOX	FINISH
268 0753	3"x 3" (75x75)	10	E-Brown

GROUND SOCKET TO CONCRETE IN

These robust ground sockets are ideal for supporting timber posts for decking or carports etc and hold the timber above ground level. Virtually out of sight, they avoid post decay in the long term.

PRODUCT CODE	POST SIZE INS (MM)	QTY PER BOX	FINISH
273 0001	4" - 6" (100-150)	5	S/Galv

HOLDFAST POST EXTENDER

These effective extension sockets make light work of extending timber posts. Sturdy and simple to install, they will extend 3" or 4" posts up to 1.2m.

STEGASTRIP - REVOLUTIONARY SECURITY SYSTEM

- Stegastrip is a row of uniquely configured flat plastic spikes that are designed for maximum effect against unwanted intruders.
- When fitted back-to-back and secured together with screws, Stegastrip forms a rotating spiked deterrent when used in conjunction with the optional mounting post.

(More details available on request)

SIZE MM	PACK SIZE (FLAT)	COLOUR	CODE
L500 x H60 x W50	25m	Black	718 500 3

STEGASTRIP ROTATION MOUNTING POSTS

- Stegastrip optional post converts Stegastrip to a rotating spiked deterrent.

QTY PER PACK	COLOUR	CODE
1	Black	718 000 3

Please note when using as a rotating deterrent a 25m pack will cover 12.5m run.

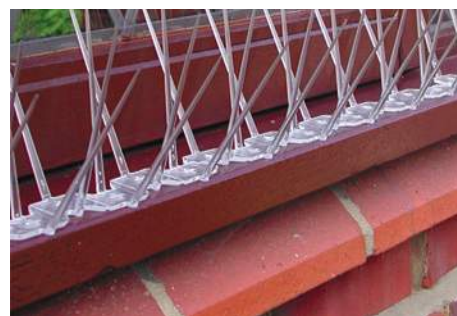

BIRDBAN - ANTI PERCHING SPIKES

An effective, non harmful deterrent for birds. Birdban is made from polycarbonate and is suitable for protecting all pigeon perching/roosting sites such as window sills, ledges, pipes, gutters and chimney stacks etc.

(More details available on request)

Want to know more about the **UNI-LATCH** range of gate ironmongery?

SEE PAGES 45 AND 50

First select the wooden or metal Uni-Latch Gate Kit as appropriate. Then choose from the following range of handles:

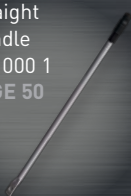

- THE STANDARD 'STRAIGHT' HANDLE
- THE EASY REACH 'U' SHAPED HANDLE
- THE 'STOCK PROOF' HANDLE

Secondly select the best option of compatible field gate hinge sets which include:

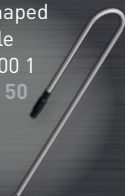

- 45° SELF CLOSING SETS DESIGNED FOR KISSING GATES
- 90° SELF CLOSING SETS DESIGNED FOR ONE WAY OPENING OF PEDESTRIAN AND BRIDLE GATES
- 180° SELF CLOSING 2 WAY SETS DESIGNED FOR ACCESS TO USERS OF MOBILITY VEHICLE USERS

And for the ultimate system use the 2 way gate latch which is compatible with the 180° hinge set

Patura Electric Fencing

...one of the best
electric fencing
systems in the World...

When you invest in electric fencing, you'll want to be sure you can depend on it, without question, without fail - whether it's to keep animals in or to keep them out!

Already the "system of choice" across Continental Europe, Patura is a respected brand with an enviable reputation for practical, efficient yet innovative products.

WHATEVER YOU NEED...

Fencing for cattle, sheep, goats, pigs, poultry, wild or domestic animals and equestrian uses, you can choose exactly the right options, specifically developed for the job.

VIRTUALLY MAINTENANCE-FREE PERMANENT FENCING...

Choose from steel wire, polywire, polyrope or polytape to achieve the right mix of durability, visibility and conductivity.

QUICK AND EASY TEMPORARY SOLUTIONS...

You could fence a hectare in under an hour – that's fast! – and we even have portable overnight trekking options.

THE RIGHT POWER, GUARANTEED...

Mains, battery or environmentally-friendly solar powered units; multi-function, multi-voltage and even remote control! Thankfully they're all easy to operate.

CONTROL AT YOUR FINGERTIPS...

With state-of-the-art insulators, earthing, monitoring and fault detection, you can be sure your electric fencing will be reliable, safe and as economical as possible.

Combining the latest technologies and materials with guaranteed quality, reliability and durability, plus German attention to detail from the acknowledged experts in electric fencing.

Patura won't let you down, guaranteed.

The Electric Fence Circuit Explained

AN ELECTRIC FENCE CIRCUIT CONSISTS OF 5 MAIN PARTS:

- ① The energiser produces regular current pulses.
- ② The fence wiring transports the current along the fence. Insulators ensure that the current is not led away to the soil
- ③ When an animal touches the fence the current travels through the animal's body.
- ④ The current travels through the soil.
- ⑤ The earth stakes carry the current back to the energiser.

The energiser (Power Source)

An efficient energiser is the foundation of the basic power supply to your electric fence. The output power of an energiser is specified in joules.

Four factors play a crucial role when deciding which energiser to use:

- ① Vegetation load on the fence
- ② Fence length and conductivity of the wire used
- ③ Type of animal
- ④ Whether a permanent or temporary (moveable) system is required

You will find detailed advice regarding the selection of an energiser in the tables for the particular energisers.

SUMMARY

Minimum power requirement depends on fence length and vegetation level:

Up to 500 m no vegetation –
min. 0.25 joules

Up to 1000 m normal vegetation –
min. 2.0 joules

Up to 1000 m heavy vegetation –
min. 6.0 joules

0.33 joules / 9 volts

0.63 joules / Solar 12 volts

0.05 joules / 3 volts

2 joules / 12 + 230 volts

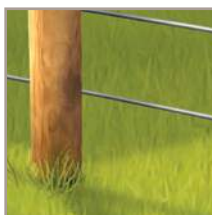

Choosing the right energiser

Basic Information on Electric Fencing

In order to simplify the choice of an energiser in any particular circumstance, consider all the following parameters.

VEGETATION (WEEDS ETC)

The decisive role in the selection of an energiser is determined by the effect of vegetation at the fence. The high output energy of the PATURA energisers is used primarily to destroy heavy vegetation at the fence and, despite this vegetation, to maintain a high voltage level at the fence. These are the various vegetation conditions:

No vegetation –
no contact between
the vegetation and
the fence wire

Normal vegetation –
the vegetation is
often touching
the wire

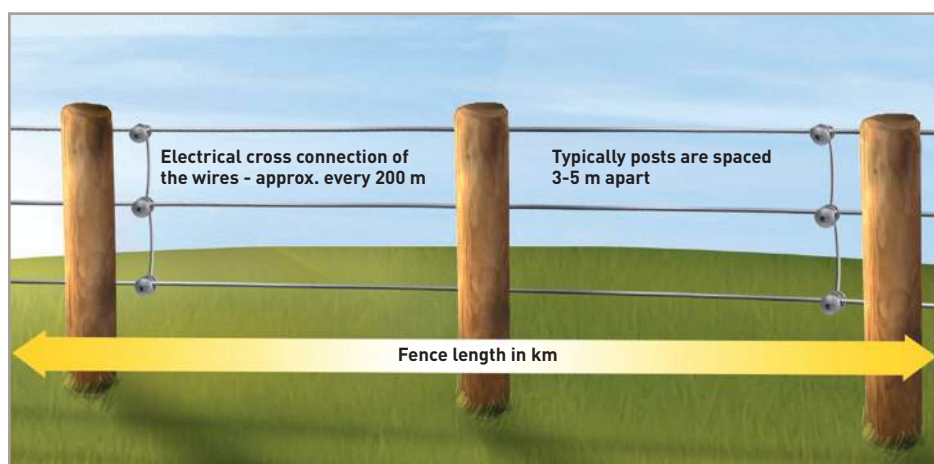

Heavy vegetation –
the wire runs
completely in
vegetation

Refer to charts
on pages 228-231
for detail relating
to the distances
energisers will
power.

FENCE LENGTH

After the vegetation, the length of the fence plays the next most important role in the selection of equipment. By fence length we mean not the total length of the individual wires added together, but simply the length of the actual fence itself. Multi-wire fences carry the current better than single strand ones, providing that the wires are connected to each other at regular intervals.

ANIMAL TYPE

The type of animal plays an important role in the selection. With animals that are difficult to contain, such as wild animals, sheep, goats and fowl, powerful equipment should be used. With more easily contained animals, such as cattle, horses, pigs and domestic animals, less powerful equipment is needed for the equivalent length of fencing.

For recommended maximum fence length please refer to the tables for the particular energisers.

Animals that are easy to contain

Animals that are difficult to contain

THE POWER SOURCE

Various power sources are available for powering energisers:

- 230 volts AC from the power outlet
- 12 volts DC from a rechargeable battery
- 12 volts DC from solar cells + battery
- 9 volts DC from non-rechargeable batteries

There are many reasons for choosing an energiser with a mains connection, should such a connection be available: the acquisition price of the energiser is relatively low, the energy costs are extremely low, and the ease of operation is very high. If there is no mains supply available, then the next best alternative is an equipment with a 12 volt battery connection. The energy costs are still justifiable, but the maintenance requirement for the recharging of the batteries is nonetheless considerable.

In order to minimise this requirement – at least in the spring to autumn period – we recommend the use of solar panels, especially so with the more powerful 12 volt energisers.

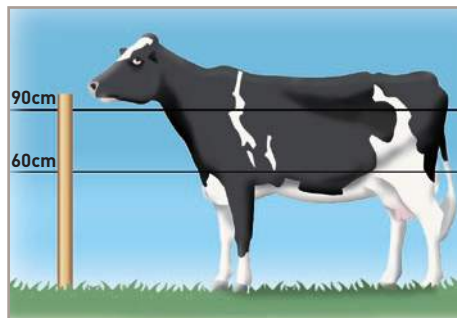

The most expensive alternative for powering energisers is the use of 9 volt non-rechargeable dry batteries, which also have to be disposed as special waste when exhausted. The advantage with these energisers is that they are easy to use, but their low power is a disadvantage.

Recommended Wire Spacings

Fence animals in...

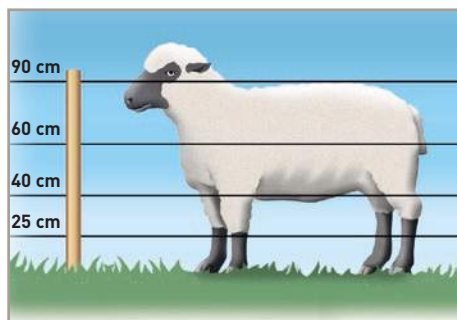

In principle, containing animals is easier than excluding them. Animals that are contained, quickly get used to the fence and can be relied upon to respect it. In excluding animals, we have to consider that animals approaching the fence have no previous experience of it. In this case we need to ensure that initially the animal receives a strong and memorable electric shock, and adjusts itself to give the electric fence the necessary respect. Thus for exclusion fences, only especially powerful energisers should be used.

COWS

Electric fences for cows are 0.85 to 1.05 m high with 1 to 2 wires.

SHEEP

Electric fences for sheep require 3 or 4 highly conductive wires at the spaces shown. (The bottom wire is only necessary if lambs are being kept in)

ELECTRIC FENCES

Electric fences are suitable for containing or deterring just about all kinds of animal.

The fences differ only in their height, the number of wires and partly in the fence material.

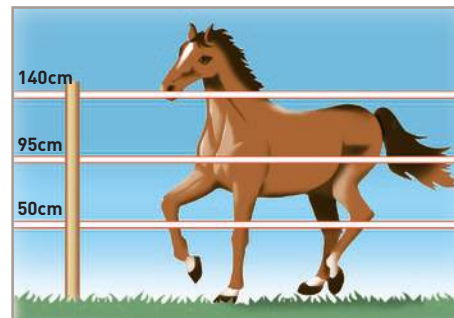

Whether the fence is to be an outer fence or a subdivision also plays a role.

On these pages you will find the information on outer fence construction with respect to the quantity and height of wires for the most important types of animal.

For inner fences the heights can be selected as some 10 to 15 cm less, and one wire fewer can possibly be used.

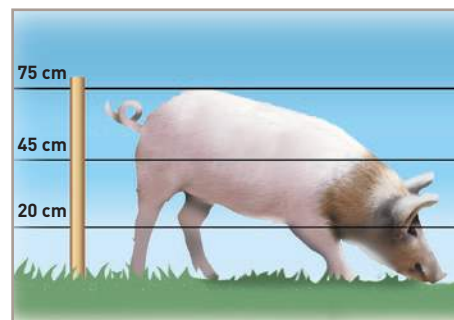

We will be pleased to advise you on any containment fencing questions.

HORSES & PONIES

Electric fences for large horses are 1.30 to 1.60 m high with 2 to 3 conducting wires.

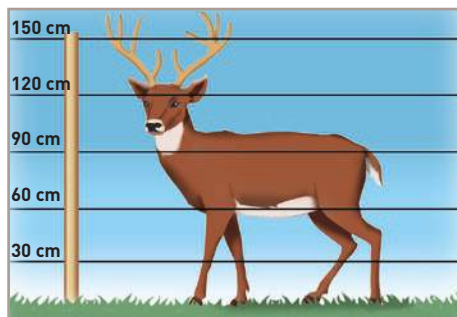

PIGS

Electric fences for pigs are 0.55 to 0.75 m high with 2 to 3 wires. Outer fences for domestic pigs should have a second fence to protect against wild animals.

...or keep wildlife out

EXCLUDING ROE-DEER

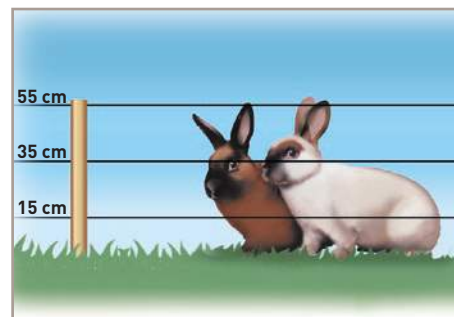

Electric fences for protecting against red deer are up to 1.50 m high with 5 wires.

THE ELECTRIC FENCE FOR EXCLUDING ANIMALS

As stated above, electric fences used for keeping animals out (excluding) require high power energisers. Also be sure to choose the right conductor as wires may be subject to extreme power loss (wires placed near to the ground or through woodland). The best product to use to withstand this requirement is aluminium wire featured on page 234.

EXCLUDING RABBITS

Electric fences for protecting against rabbits are approx. 0.55 m high with 3 wires. With rabbits, in order to prevent them digging under the fence, it may be necessary to lay an earthed wire directly on the ground. The fence should be slightly canted towards the animals.

Installation Guidelines

Cattle Fencing

A Compact Reel can be hooked onto existing fencing if desired. Note: There is no electrical connection

Temporary Horse Paddock Fencing

The PATURA temporary fence system is ideal for fencing in areas for a short term or in changing locations.

All parts are designed for a quick and easy erection of the fence. It is possible for one person to fence in an area of one hectare, in less than half an hour.

All 9 v energisers are also suitable for 12 v operation

REF	DESCRIPTION	JOULES	CODE
P 20	Great value amongst PATURA 9 V dry-cell battery energisers; ideal for small cattle and horse pastures; user-friendly switch; single indicator light.	0.22	P141220
P 40	The all-round PATURA energiser for 9 V dry-cell batteries; ideal for cattle and horse pastures with no or little vegetation; battery test, slow pulse sequence, night save mode; half / full power.	0.29	P141420
P 60	Our most powerful energiser using 9 V dry-cell batteries; high performance for effective animal control even under load conditions at the fence; Battery test, slow mode, night save mode; half / full power	0.43	P141620

REF	DESCRIPTION	JOULES	CODE
P 10	This handy little energiser is ideal for light duty work with horses and ponies. It is also suitable for pheasant release pens and for domestic work such as keeping cats out of gardens and herons from fish ponds. Powered by 2 x D-size 1.5v dry cell batteries. Max fence length: 800 m	0.05	P140700
P 30	Energiser using 4 x 1.5 V internal batteries, size D or 12 volt battery; the ideal energiser for small horse paddocks, for trekking and for domestic animals.	0.16	P140800
P 30 with mounting post	As P30, but with addition of practical mounting post, which under good earth conditions doubles as an earth stake.	0.16	P140900

REF	DESCRIPTION	QTY	CODE
12 V	Adaptor set / lead set for connecting all PATURA 9 V dry-cell battery energiser to 12 V battery or mains adaptor.	1 Pr	P159101

Only perfect earthing allows maximum power on the fence

Multi-voltage Energisers for 230 Volt + 12 Volt

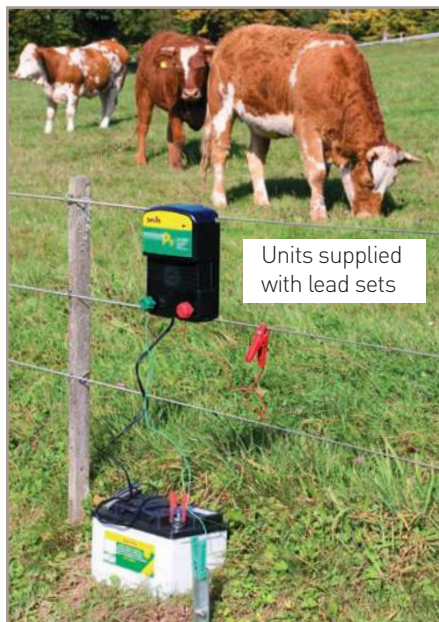

REF	DESCRIPTION	JOULES	CODE
P 5	The PATURA multi-voltage energiser for electric fences for cattle, sheep and horses, also for longer fences with heavier vegetation; including 230 V mains adaptor and 12 V adaptor cable.	6.4	P147500
P 4	The PATURA multi-voltage energiser for longer fences with normal vegetation.	4.5	P147410
P 3	The PATURA multi-voltage energiser for electric fences with normal vegetation.	2.7	P147310
P 2	The PATURA multi-voltage energiser for short fences with light vegetation for cattle and horses.	1.4	P147210
P 1	The PATURA multi-voltage energiser for short fences with light vegetation and domestic animals.	0.7	P147110

Note:

These energisers are supplied with stainless steel connectors and all leadsets.

230 V connection (with mains adaptor): inside a building (without fire risk) or on an outside wall below a cover.

Units supplied with lead sets

Mounting to a fence post: the energiser is directly attached to a fence post – The P1 is the ideal energiser for short temporary fences

ATTENTION:

Do not use an extension reel outdoors to connect the energiser to the mains system

PATURA energisers comply with all obligatory standards

Multi-voltage Energisers for 230 Volt + 12 Volt

REF	DESCRIPTION	JOULES	CODE
P 1500	The PATURA multi-function energiser with the newest, efficient energiser technology for short fences with little vegetation for cattle and horses; 5-step fence and battery monitor, 6-step switch, deep discharge protection; including 230 V mains adaptor, stainless steel 12 V adaptor set and fence/earth leadset	1.4	P142100
P 2500	The PATURA multi-function energiser with the newest, efficient energiser technology for fences with normal vegetation; 5-step fence and battery monitor, 6-step switch, deep discharge protection; including 230 V mains adaptor, stainless steel 12 V adaptor set and fence/earth leadset	2.7	P142200
P 3500	The PATURA multi-function energiser with the newest, efficient energiser technology even for longer fences with normal vegetation; 5-step fence and battery monitor, 6-step switch, deep discharge protection; including 230 V mains adaptor, stainless steel 12 V adaptor set and fence/earth leadset	4.5	P142300
P 3800	The PATURA multi-function energiser with the newest, efficient energiser technology even for longer fences with heavier vegetation; 5-step fence and battery monitor, 6-step switch, deep discharge protection, including 230 V mains adaptor, stainless steel 12 V adaptor set and fence/earth leadset	6.4	P142400

Note:

These energisers are supplied with stainless steel connectors and all leadsets.

6-step switch

A OFF	D Night slow, day fast
B Battery Test	E Half power
C Night fast, day slow	F Full power

Note:

The battery test mode works with 12 v batteries only.

For effective electric fences always install the earth connection correctly

Solar Power Systems

Suggestions of places to site your P35 or P70

A solar panel can be mounted anywhere. So long as it is not in a shaded place it will work very effectively.

Note: If theft is likely to be a significant risk mount your solar panel pole as illustrated. Simply connect your energizer to the fence using 2.5mm lead-out cable.

Portable solar power energisers (comes with integral battery)

P 35 - LOW POWER

These energisers have an integrated 2.6 W solar panel and 12V/7Ah gel battery, for easy maintenance-free operation of fences up to a maximum length of 1600 m. Typically used for the control of: cattle, horses & general small-holdings.

Max fence length where there is no vegetation: 1600 m

With some vegetation: 600 m

Stored energy: 0.20 joules

Max Output energy: 0.15 joules

QTY Each Code P140400

P 70 - HIGH POWER

Max fence length where there is no vegetation: 4 km

With some vegetation: 2 km

Stored energy: 0.63 joules

Max Output energy: 0.51 joules

QTY Each Code P140600

SOLAR PANELS

Choose from a range of 4 different solar panels to suit every application. 15W, 25W, 40W & 60W. Each panel is supplied with a mounting bracket (see inset) Prices and specification can be supplied on request.

EARTH STAKE SUPPORT STAND

2m earth stake can be used to double as support stand for P35 & P70 energisers. Drive 500mm into soil and mount solar energiser onto the T-post profile.

QTY Each Code P161802

Wires for Permanent Fencing

PLAIN STEEL WIRE

1.8 mm Ø galvanized, 5 kg = approx. 250 m
1.6 mm Ø galvanized, 5 kg = approx. 315 m

DESCRIPTION

5 kg coil, 1.8 mm
5 kg coil, 1.6 mm

CODE

P109100
P109000

Use with permanent insulators P168325

HIPPOWIRE

With conductive plastic coating, approx. 7mm diameter

DESCRIPTION

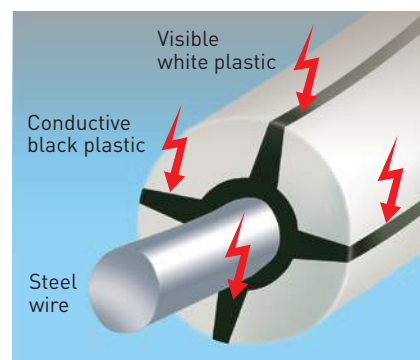

304 m roll, white
304 m roll, brown

CODE

P190400
P190410

PATURA HIPPOWIRE: THE BETTER ALTERNATIVE

The best visibility, optimum conductivity, minimal risk of injury and a long life – the PATURA HippoWire meets all those demands with 2.5 mm steel wire sheathed in conductive plastic. The steel wire core ensures the best conductivity, the thick plastic sheathing offers good visibility and the lowest risk of injury, while the 4 black conducting plastic portions ensure that the current is best passed to the animal.

Unique: 4 conductors for optimum security

STRANDED WIRE

Galvanised stranded metal; Ø 1.5 mm

DESCRIPTION

200 m coil
500 m coil

CODE

P108100
P108200

Typically, used with outdoor pigs and permanent cattle fences

ALUMINIUM WIRE

Very high conductivity, 4 times lighter than (normal) plain steel wire.
Tip: These wires only require a lightweight tension up to 20kg which can be easily reached by hand.

DESCRIPTION

1.8 mm diameter, 400 m roll
2.0 mm diameter, 400 m roll

CODE

P191700
P191800

Note:

This product is particularly suitable for fences used to deter wildlife as wires can be installed close to the ground.

Polywire and Polyrope

TORNADO XL POLYWIRE

DESCRIPTION	COPPER STRANDS	STAINLESS STEEL STRANDS	CODE

THE DEMANDS ON POLYTAPE

The most important criteria in the assessment of a polytape are its conductivity, its mechanical strength and, particularly for horses, its visibility. Narrow tapes offer the possibility for simple rolling up combined with low weight and higher flexibility. Broad tapes offer the optimum visibility for permanent fences. For optimum longevity for resistance to wind and weather, however, they require correct erection using high quality accessories.

Permanent Fence Insulators

PORCELAIN STRAIN INSULATOR

Start and end insulator for high tensile loads

PACK TYPE	QTY	CODE
Hanging Card	3	P169203
Packet	10	P169210
Bucket	50	P169250

STRAIN INSULATOR

Start and end insulator for high tensile loads; plastic; black

PACK TYPE	QTY	CODE
Hanging Card	6	P167706
Packet	25	P167725
Bucket	100	P167760

SUPER STRAIN INSULATOR

Start and end insulator for high tensile loads; fibreglass-reinforced plastic; white

PACK TYPE	QTY	CODE
Hanging Card	6	P167806
Packet	25	P167825
Bucket	100	P167860

PERMANENT FENCE INSULATOR

For wire

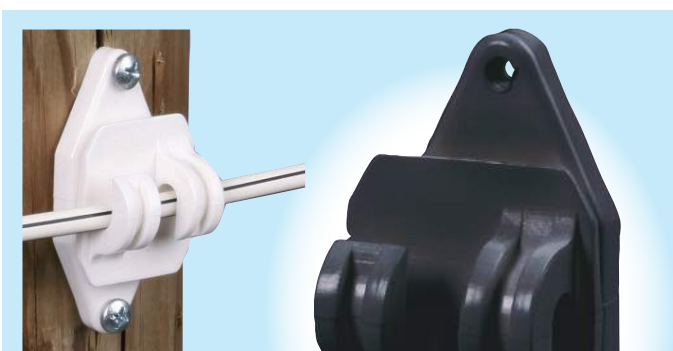

Solid, UV resistant plastic insulator; mount using staples; black

PACK TYPE	QTY	CODE
Packet	25	P167325
Bucket	100	P167362

Mounting tip:

In curves, the insulator needs to be put under pressure towards the post.

PERMANENT FENCE INSULATOR

For rope and HippoWire

Solid, UV resistant plastic insulator; mount using screws; white or black

COLOUR	QTY	CODE
White	25	P168325
Black	25	P168425

Permanent Fence Insulators for Wire & Rope

UNIVERSAL ROPE/TAPE INSULATOR

Wood screw thread

For tapes up to 20 mm and rope, Shaft diameter 6 mm; black

PACK TYPE	QTY	CODE
Hanging Card	25	P127325

RING INSULATOR

With wood screw thread

Shaft diameter 6 mm, black

PACK TYPE	QTY	CODE
Bag	25	P101725
Bucket	100	P101760

SMALL NAIL-ON INSULATOR

Traditional nail-on economy insulator method. Generally used with steel wire. Fix to wood posts using integrated nail.

PACK TYPE	QTY	CODE
Bag	100	P101110

CORNER INSULATOR »PULLEY TYPE«

For redirection of polywires at corners without chafing; black

THREAD TYPE	QTY	CODE
Wood Screw	Pack of 6	P102206
Metric M8	Pack of 6	P104206

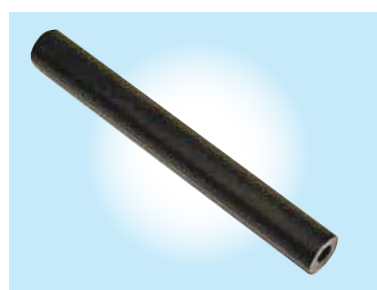

BOLT-ON RING INSULATOR

DESCRIPTION	QTY	CODE
Long metric thread M6 x 80 Shaft diameter 6mm; length 80 mm, black	25	P102925
With metric thread M6. High quality plastic; solid shaft attachment; large leakage rings; shaft diameter 6 mm, black	25	P102425

INSULTUBE INSULATOR

Traditional tube method. Slide insulator onto wire prior to fixing to the posts. Generally used with high tensile wire. Fix to wood posts using 40mm staples (Not supplied)

PACK TYPE	QTY	CODE
Bag	Pack of 100	P161410

SUPER ROUND-ROD INSULATOR

UV-resistant, solid plastic insulator, black; height adjustable; for all posts without cap insulator up to 16 mm; suitable for polywires and polytapes up to 12.5 mm

PACK TYPE	QTY	CODE
Bag	25	P165625

Offset Insulators

RING INSULATOR
With long shaft (20 cm)
 Wood screw thread; length of shaft 20 cm; for polywires and polyropes

LENGTH	QTY	CODE
20cm	10	P101610

POLYROPE AND POLYTAPE INSULATOR
With long shaft (18 cm)
 Wood screw thread; length of shaft 18 cm; for polytapes up to 20 mm and polyrope

DESCRIPTION	QTY	CODE
Wood screw thread	10	P127410
Metric thread M6	10	P127710

P127710

Increase the life of your fences

PATURA offers the possibility of allowing old conventional fences to provide effective animal control for many years to come. New, non-electric fences have when equipped with offsets, almost twice the longevity. Insulators on offsets can be fixed to 2 horizontal wires of a fence, or attached directly to the post. The live wire runs inside the actual fence. On level land the offsets can be spaced at up to 8 m apart.

OFFSET PIGTAIL INSULATOR
 Offset insulator made of round bar steel with an insulated loop; can also be used for polytape up to 40 mm: Length 25 and 40 mm for nailing directly onto wooden posts (secure additionally with 1 staple), secure offset insulator with at least 2 staples when installed on top of post.

LENGTH	QTY	CODE
25cm long	5	P166105
40 cm long	5	P166205
two-sided, 80 cm long	5	P166505

Tape Insulators & Joiners

POLYTAPE INSULATOR

Economy nail-on

Suitable for all sizes of tapes and ropes

PACK TYPE	QTY	CODE
Bag	25	P166825
Bucket	60	P166851

POLYTAPE LINE INSULATOR

Wood screw thread

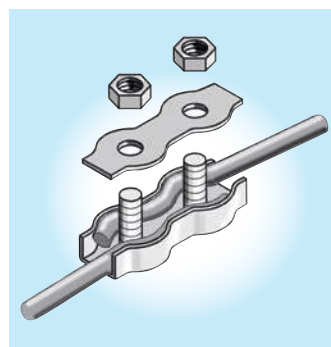

For tapes up to 40 mm, shaft diameter 6 mm, black

TORNADO POLYTAPE INSULATOR

Plastic

Rugged line insulator for polytape tensioning; suitable for all polytapes up to 40 mm; safe and protective clamping of the polytape due to offset rubber inserts; black

PACK TYPE

Packet	
QTY	CODE
20	P166920

CORNER INSULATOR FOR POLYTAPE

with 2 tape joiners

Corner insulator for polytape up to 40 mm incl. 2 tape joiners to connect and/or attach polytape

PACK TYPE

Hanging Card	
QTY	CODE
3	P168003

CORNER INSULATOR FOR POLYTAPE

Plastic

Sturdy insulator for polytape up to 40mm; clamps the tape safely between 2 faces; ideal as corner insulator for 40mm polytape

PACK TYPE

Hanging Card	
QTY	CODE
3	P167003

STRAIN AND CORNER INSULATOR

For polytape with connector plate

Sturdy insulator with stainless steel connector plate for polytape up to 40 mm; multiple applications in 40 mm polytape fences

PACK TYPE

Hanging Card	
QTY	CODE
3	P167103

PATURA strain and corner insulator: 1 insulator – many different uses.

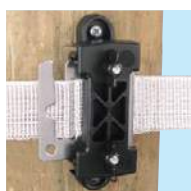

Corner insulator: as a sturdy line insulator

Corner insulator: as a sturdy corner insulator

Strain and corner insulator: as a start insulator

Strain and corner insulator: as an insulator and tape connector

Strain and corner insulator: as a 3-way insulator

Strain and corner insulator: as an insulator with gate connection

Strain and corner insulator: for the cross-connection of polytapes with cable.

Gates in the Fence – 5 basic rules

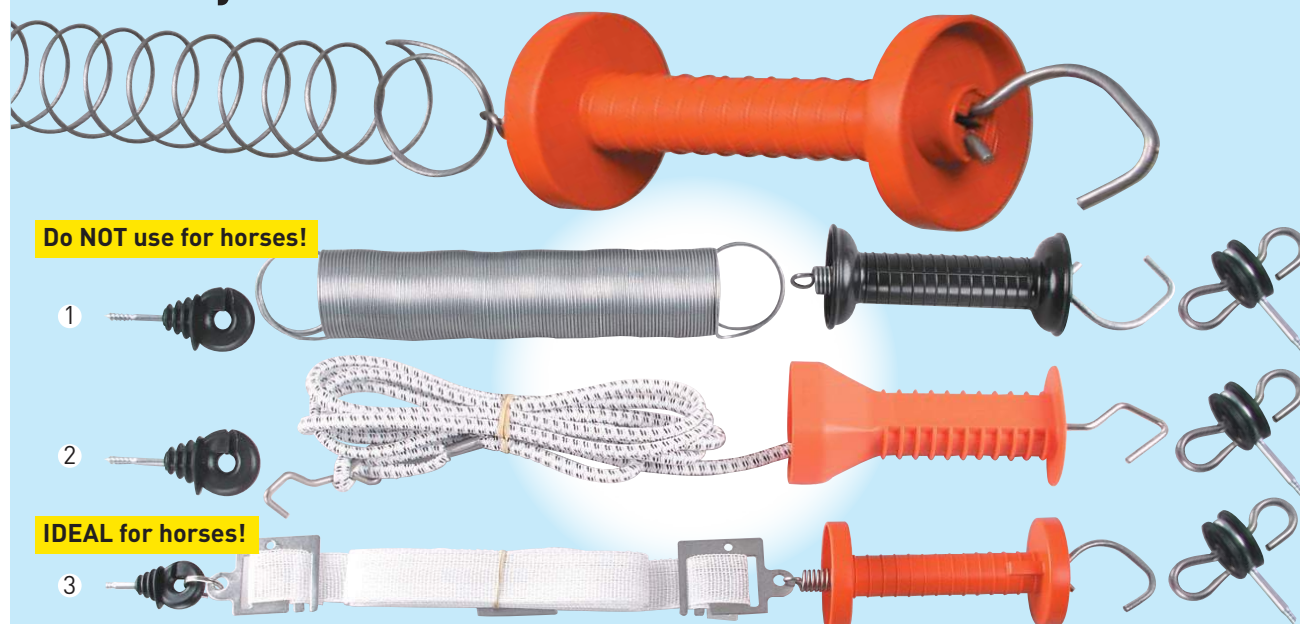

1. Keep the number of gates to a minimum, as gates are always a weak point in the fence.
2. If possible, ensure that the gate is on level ground, as the gate area is always endangered by erosion.
3. You will simplify the fence construction by putting the gates in the preferred corner areas.
4. Never run the current through gate itself from one side to the other, rather use high voltage cable to pass it under the gate.
5. Do not use spring gate sets in horse fences.

Never run the current through gate itself from one side to the other (other than for gate security using an alarm installation). The current should always be carried underground using high-voltage cable attached to either side of the gate.

Gates in fences are necessary to allow unhindered access to fenced-in areas, as well as for herding animals in and out. Gates often constitute a weak point in a fence - which is why special care is needed in their construction.

Gateway sets

Spring gate set – the practical gate

A spring gate set consists of 4 parts: the gate handle, gate handle insulator, gate tension and the insulator for attaching the spring. PATURA spring gate sets contain an especially large spring and are suitable for all gate widths from 3 to 5 metres. In the opened condition the spring carries no current, contracts to about 25 cm and hangs down, with the handle, from the gatepost. To shut the gate, the gate handle and spring are attached to the gate insulator on the other side of the gate. From here, the gate handle and spring obtain the current (see diagram above on installation detail).

SPRING GATE SET

The practical gate; extends to 5m wide; complete with 1 (ea) gate handle, spring, gate handle insulator and ring insulator

REF	DESCRIPTION	CODE
1	Standard	P164001

ELASTIC ROPE/POLYTAPE GATE SET

Each complete with gate handle, insulators and 3 m elastic, current conducting rope (extends to 6 m) or 5 m polytape

REF	DESCRIPTION	CODE
2	With elastic rope	P641201
3	With polytape	P641001

Electrical drive-through gates

You can drive onto the pasture without getting out of your vehicle

With the electrical drive-through gate it is possible to achieve easy access at frequently travelled entryways. Without an extra person it is possible to drive onto the pasture without the risk of animals escaping.

- Set always consists of 2 rods and 2 hinges
- Flexible fiberglass rod covered with conductive rubber
- Insulated handle for manual operation
- The gate opens in both directions and it closes again by itself
- Can be locked in place while open

ELECTRICAL DRIVE-THROUGH GATE

Consists of 2 conductive fiberglass rods, 2 hinges and insulated connecting cable; the stated width corresponds to the road width.

LENGTH	CODE
3.60 m (2 x 1.8 m)	P641400
5.00 m (2 x 2.5 m)	P641410

RETRACTABLE ROLLER GATE

For fast installation of flexible gates and partitions on pastures, drive paths, passage ways and paddocks. Rope or tape retract automatically and are protected inside the housing. Mounting parts and gate handle are included.

DESCRIPTION	CODE

SPECIAL GATE HANDLE

DESCRIPTION	CODE
Orange, with stainless steel hook, stainless steel spring, wide protective shield	P639400
Gate handle connector plate (stainless steel) For tapes up to 40mm	P639800

Practical tip:

"Ensure that you have rust-free contacts with stainless steel or hot-dip material"

PATURA electric fence netting, quick and easy fences

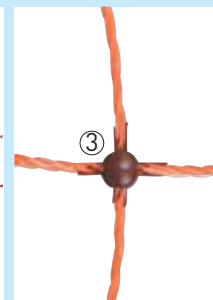

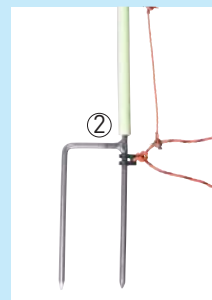

PATURA electric fence nets have flexible vertical connecting wires, which are not electrified and are securely connected to the horizontal wires by firmly welded joints.

PATURA netting - 3 distinctive advantages:

- 1 Clip for optimum connection
- 2 Double spike for easy ground insertion
- 3 Firmly welded joints

Note:

Each net includes extra ground pegs and repair kit.

Double spike enables easy tread-in to hard ground

ELECTRIC FENCE NETTING

DESCRIPTION

90 cm high, with single spike, 50 m

CODE

P108900

Electric netting fence to protect against crop damage: Note the small mesh aperture in the lower area

Sheep systems

Rapid Fence construction – step by step

1 Place mounting post with reels at one corner

2 Set corner posts at all corners and curves

3 Take the polywires from the reels and unwind

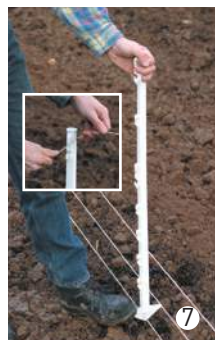

4 Run the polywires over the corner insulators at the corners

5 Attach the polywires at the end of the fence and ...

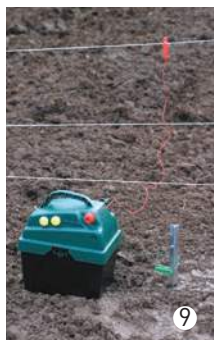

6 ... tension by winding back on the reels

7 Put in the plastic posts and attach the polywires

8 Attach the cross-connection approx. every 200 m

9 Attach and earth the energiser

Fence in 1 hectare in less than half an hour

In a short time the electric fence is ready for use

Electronic Dog Collars

PAC DOG ELECTRONIC FENCE SYSTEM

The ultimate choice for an invisible fence

This system is ideal in an environment where you wish to contain one or more dogs without using ugly and obtrusive fencing. Any number of dogs, each wearing an active Collar Unit can be contained. The collar detects a short-range radio signal radiated from a low-cost, plastic covered loop-wire, that bounds the designated area. This wire can either be lightly buried below ground; laid on the surface; tacked to an existing fence; or threaded through bushes and hedges. This wire loop has a notional maximum length of 1500 metres at 1.5mm² gauge or 3000 metres at 2.5mm² gauge.

DESCRIPTION	QTY	CODE
F200A Dog Kit	1	PF200A
Additional wire 100m Roll	1	PFWIRE
Additional fence collar	1	PF5c

Full details available on request
(Kit comes with 100m of wire)

PAC DOG REMOTE TRAINER KIT

Remote hand-held trainer

This trainer kit retains its leadership in the specialist field of Dog Control systems. The handler's ability to communicate with his dog at longer distances will give him the added confidence to enable even greater freedom from the lead. It has a long range control of up to 1000 metres from an ultra high frequency hand set.

Alarm devices for Fence Management

At last, the reliable, complete and comfortable supervision of remote pastures is possible. With the assistance of modern mobile phone technology, every alarm signal can now be transmitted to a mobile, and/or landline telephone. All you need is a SIM-card of your choice, and the mobile alarm transmitter unit will dial into all the usual GSM networks.

Schematic showing the monitoring of an electric fence system powered by batteries (with an optional solar panel) – within minutes the electric fence alarm will be transmitted from the most remote paddock to the mobile and/or landline telephone.

MOBILE - ELECTRIC FENCING ALARM

Mobile alarm transmitter unit with built-in fence voltage evaluation; infinitely variable trigger voltage; turning the fence on or off via a phone call; control of battery voltage; easy to program using the included software; own power supply with 3 x 1.5 V battery (type AA/LR6/AM-3) suitable for mains (230 V AC) and battery energisers (12 V DC); incl. external rod antenna and holder for SIM-card.

Mobile networks must be obtainable, SIM-card not supplied.

CODE

P156304

EFFECTIVE ANIMAL CONTROL WITH ELECTRIC FENCING

To maintain the safety of electric fences and to meet legal requirements, the operator is obliged to consider the following points:

- ① The fence voltage must be at least 2000 volts at every point on the fence. PATURA recommendation: 3000 volts.
- ② This is to be monitored regularly through daily measurements of the fence voltage.
- ③ This presupposes the presence of appropriate testing devices such as a fence tester, a digital voltmeter, a fence compass, a fence alert or a separate alarm system for an electric fence.
- ④ For difficult or long haired animals a fence voltage of 4000 volts is recommended.
- ⑤ Energisers with adequate power (output power) to meet the above mentioned demands, even when there are losses due to vegetation on the fence, must be installed.
- ⑥ The fence and/or the fencing material should comply with the common level of technology.
- ⑦ Depending on the fence length, fence wiring with good conductivity should be used.
- ⑧ An appropriate fence height and/or number of wires should be allowed for, depending on risk potential and animal species.

ALARM MONITOR

In the event of a drop in the fence voltage or a broken wire, an optical and an acoustic signal are generated; the voltage at which this occurs can be pre-set; connection for external alarm transmitters; for both mains and battery energisers. Power supply by 12 V battery or mains adaptor (order separately: mains adaptor Ref. 150220)

CODE

P156001

SIREN

For attachment to the PATURA alarm monitor (Ref. 156001); 12 V, 120 dB

CODE

P156901

TELEPHONE DIALING UNIT

For direct connection to the adjoining alarm monitor; automatically dials up to 6 preprogrammed telephone numbers; Powered by 12 V battery/mains adaptor (order separately: mains adaptor Ref. 150210)

Conventional telephone connection must be available

CODE

P156202

ALARM FLASHLIGHT

For attachment to the PATURA alarm monitor (Ref. 156001); 12 V

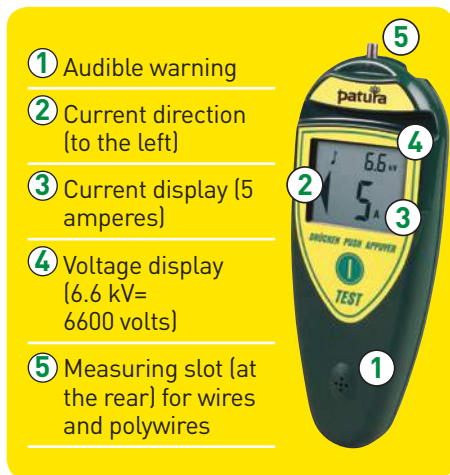

CODE

P156801

Warning Lights & Fence Testers

All known digital voltmeters only measure the fence voltage without an animal touching the fence. Only the new PATURA digital voltmeter will show you the very important voltage simulating animal contact. Only if this voltage is above 2000 volts your animals will receive a reasonable shock.

FENCE COMPASS

Digital voltmeter with ammeter for exact failure analysis on an electric fence; illuminated LCD display, audible indicator if there is voltage on fence; ideal for use on wire, limited use on polywire, not suitable for polyrope or polytape

PACK TYPE	QTY	CODE
Hanging Card	1	P150901

DIGITAL VOLTMETER

The ideal measuring equipment with earth stake and fence contacts; digital display; essential for the monitoring of electric fences, their earthing, for fault finding and for checking equipment; with integrated activatable load resistor to simulate animal contact

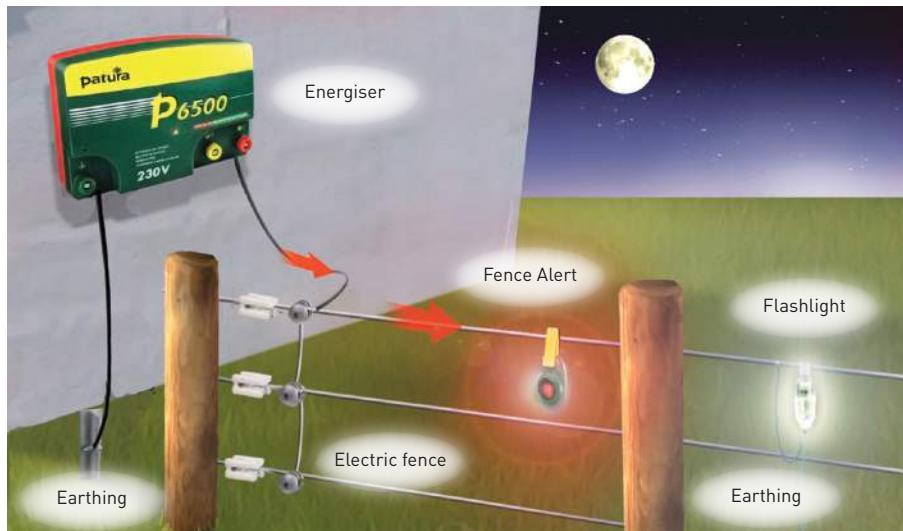

PACK TYPE	CODE
Hanging Card	P150302

FENCE TESTER (8 LEVELS)

Essential for daily fence monitoring; shows the condition of your fence in eight stages (1000 to 8000 volts); complete with connecting cable and earth stake

PACK TYPE	CODE
Hanging Card	P150002

Place your Fence Alert at a place where you pass by regularly. If there is no or too little voltage on the fence, the fence alert is flashing red or the flashlight goes off. Install several Fence Alerts at critical points across your paddocks.

Fence Alert

The Fence Alert is firmly installed into the electric fence, and provides an alarm by means of a bright red flashing light as soon as the voltage falls to a pre-determined level. There are two trigger levels to choose from. The Fence Alert needs no earth connection. It is powered by a built-in battery.

FENCE ALERT

Shows you by means of a flashing light if your fence voltage has fallen too far; visible from up to 1.5 km; two trigger levels; simply hung onto the wire, polywire or polyrope (no earthing required)

PACK TYPE	CODE
Hanging Card	P150401

FLASHLIGHT

Hook flashlight onto wire and connect leads to fence and earth. Light will flash provided the power is in excess of 3000 volts. Serves to also deter wildlife as well as a voltage indicator.

PACK TYPE	QTY	CODE
Hanging Card	1	P150510

Tools

PATURA rotating wire tensioner: The clever way to tighten wires

PATURA's rotating wire tensioner enables you to easily tighten wires without cutting them. The tensioner is inserted in the wire at any place on the fence, the wire tensioning handle is attached and the tensioner is turned around its own axle until the correct fence tension is reached. Then the cotter pin is installed and the wire tensioner handle is removed. If necessary, the wire can be retightened and/or relaxed, at any time. Rotating wire tensioners must be installed in every section of the fence.

Insert the rotating wire tensioner in the wire, attach the wire tensioner handle

Turn the wire tensioner handle until the correct fence tension is reached

Hang the wire tensioner handle in the wire, install the cotter pin and remove the wire tensioner handle.

Due to the light weight, the wire tensioner hangs lightly in the wire.

STEEL TENSION SPRING

By adding this spring mechanism to your fence you will reduce the load at the corners and provide for fluctuations in the tension of the fence regardless of air temperature. This product is often used with aluminium wire and narrow gauge wires <1.6mm. For heavier wires <2.5mm use larger model.

PACK TYPE	CODE
Light duty Model for wires <1.6mm	P162600
Heavy duty model <2.5mm	P162700

ROTATING WIRE TENSIONER

Allows rapid tensioning and de-tensioning of wires and rope without cutting them - Aluminium.

PACK TYPE	CODE
Loose	P164303
Box Outer	P164325

WIRE TENSIONER HANDLE

(not illustrated)
For operating the rotating wire tensioner - Galvanised.

PACK TYPE	CODE
Hanging Card	P644000

WIRE STRAINER WITH INSULATOR AND ROPE

To easily tighten and fasten live wires to tension posts up to 20 cm diameter. No special knots need to be tied into the wire. Loop wire rope around strainer post and pass strainer through hoop to tie-off. Secure with staples.

PACK TYPE	QTY	CODE
Hanging Card	2	P164621

WIRE DISPENSER

For the simple rolling up of steel wire, horse wire and plain steel wire; with base to allow direct insertion into the ground

PACK TYPE	CODE
Loose	P152800

ELECTRIC FENCING PLIERS

Traditional. With hammer and wire cutter

CODE
P152201

SCREW ADAPTOR

For the easy screwing in of ring insulators in softwood posts using an electric screwdriver

PACK TYPE	CODE
Hanging Card	P158901

WIRE STRAINER WITH INSULATOR

To tighten live wires easily and securely.

PACK TYPE	QTY	CODE
Hanging Card	1	P164610
Box Outer	10	P164612

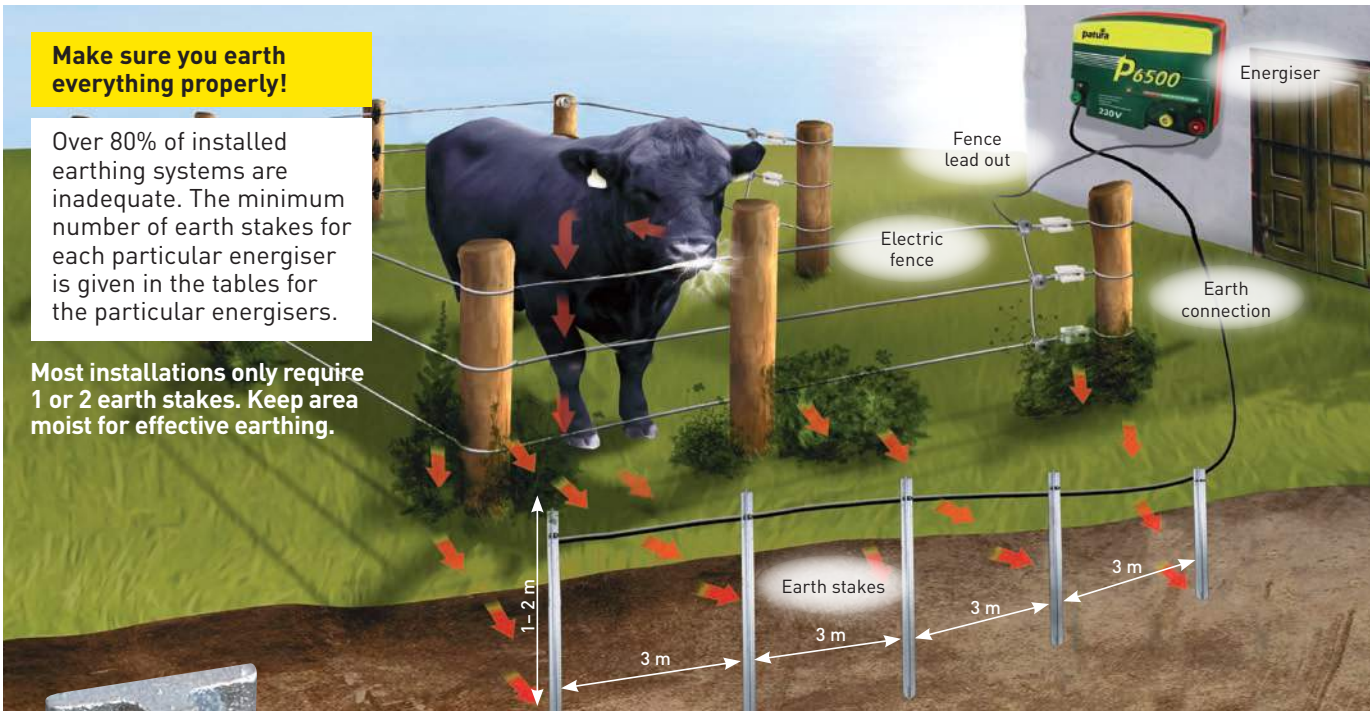

Earth stakes – the key accessory

Make sure you earth everything properly!

Over 80% of installed earthing systems are inadequate. The minimum number of earth stakes for each particular energiser is given in the tables for the particular energisers.

Most installations only require 1 or 2 earth stakes. Keep area moist for effective earthing.

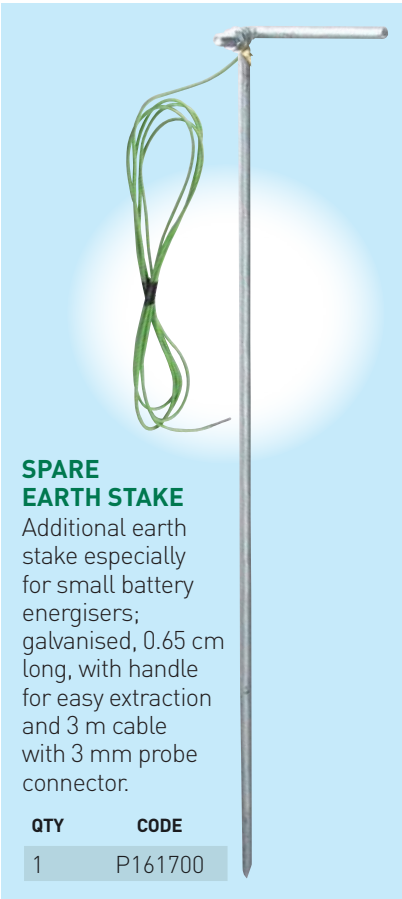

TEST PROCEDURE

- Short circuit the fence by putting steel posts into the ground approximately 100 m away from the energiser, and lay them against the fence wires. This should lower the fence voltage to 2000 volts.
- Use a digital voltmeter and insert its earth probe into the ground approx. 1 m away from the energiser's last earth stake. Touch the energiser's last earth stake with the measurement contact of the digital voltmeter.
- The digital voltmeter indicates the earth voltage when the energiser is switched on:
- 0 to 200 volts (0.2 kV to 0.6 kV display): The earthing is perfect
- 200 to 600 V (0.2 kV to 0.6 kV display): The earthing is still acceptable
- Over 600 volts: The earthing needs to be improved by adding more and, if necessary, longer earth stakes, thereby increasing the fence voltage and the safety of the fence.

Monitoring the earth

If the earth system of an energiser is inadequate, current can be measured between the earth stake and the surrounding soil or an electric shock can be felt when touching the earth system. The earthing system of an energiser should be checked at the time of installation and at least once a year with permanently installed energisers (preferably during dry soil conditions).

P151300

P151400

Batteries - How They Compare

Along with solar panels, rechargeable batteries are the most environmentally friendly alternative for providing the power for electric fences where there is no mains connection. All 9 V PATURA battery energisers can be powered by a 12 V rechargeable battery. Use rechargeable batteries to supply your electric fences and make a valuable contribution to the environment. Up to 95 % of the materials used in the manufacture of rechargeable batteries can be recycled, whereas the typical 9 V electric fence battery is a disposable item.

The constant voltage supply of PATURA alkaline batteries provides full energiser performance until the very last day.

PATURA 9 V alkaline electric fence battery

PATURA alkaline batteries have a high constant voltage supply through-out their life. Thus it can be assured that throughout this time the energiser will always provide a constant output to the fence. In comparison with a zinc-carbon battery of the same capacity there is more energy stored (see figure). PATURA alkaline batteries contain neither mercury nor cadmium. Suitable for storage up to 3 years.

By the use of the right battery you get longer use from them and thus make a contribution in preventing waste batteries.

PATURA 12 V glass mat batteries

Starter batteries for cars or trucks have decisive disadvantages if used to power energisers. They have a high self-discharge, and are only cycle proof to a small degree. i.e., they will stand for markedly fewer charge-discharge cycles. PATURA glass mat batteries for 12 V energisers and solar installations are totally maintenance-free and function independent from locations. They have a low self-discharge and are especially cyclic proof.

THE CORRECT USE OF BATTERIES

9 Volt:

All 9 V dry batteries are air-oxygen batteries, i.e. they need oxygen to produce energy.

- Before use be sure to remove the stickers which are covering the air breathers.
- If taking the battery out of service for an extended period, seal the air breathers again and store the battery in a cool dry place. (Thus self-discharge is prevented).

12 Volt:

Correct handling is important for extending the life of rechargeable batteries.

- Standard/special batteries are dry charged, and require to be filled with normal trade-standard battery acid before use.
- Recharge batteries in due time, and always recharge them fully.
- Never over-charge batteries (use an automatic battery charger)
- With standard/special batteries check the acid level every 4 weeks or so and top up with distilled water as required.
- If taking the battery out of service for an extended period, charge the battery fully, then top up the charge after 8 weeks.

Note: All 12 V lead batteries can suffer from deep discharge due to conventional energisers, which can lead to the destruction of the battery. PATURA energisers with built-in deep discharge protection reliably prevent this.

Capacity of batteries

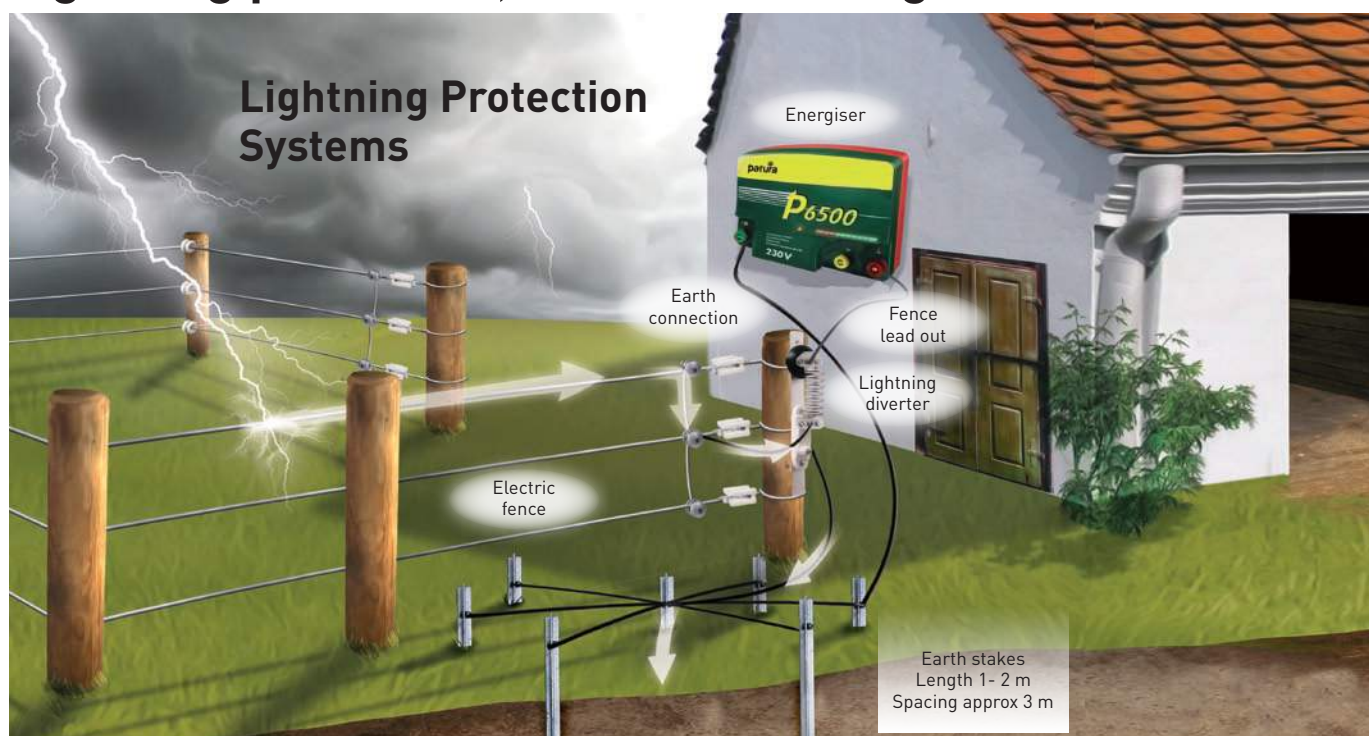

How long does my 12 V battery last?

- We state the capacity of all our rechargeable batteries based on 100 hours standard discharge. A battery is completely discharged after 100 hours and the extracted capacity is determined: This is referred to as capacity C100
- Calculation of battery life:
 1. Usable capacity = nominal capacity x 65 % e.g. 80 Ah x 65 % = 52 Ah
 2. Current consumption energiser: e.g. 0.125 A
 3. Operation period (hours) = capacity/current consumption. i.e. 52 Ah/0.125 A = 416 hours

Practical tips in the use of 12 V batteries

- Buy 2 small batteries (e.g. 12 V / 45 Ah) rather than one large one.
- For charging, use the 12 V – 2.5 A automatic battery charger.
- Always leave one battery attached to the charger, so that it is always charged.
- Change the battery in the energiser as soon as the battery indicator lights illuminate.
- The battery will reward you by providing a long life, and thus saving you money.

Lightning protection, Switches and Signs

International standard requirements:

"Energisers for the operation of electric fence installations on pasture land may not be installed in buildings that are susceptible to fire such as barns, hay lofts and stables. To protect against lightning damage, a lightning protection system (spark gap with earthing) must be built into the fence lead-out before the introduction of that lead out cable into the building".

LIGHTNING DIVERTER

For mounting on a wall or fence post; protects your energiser by leading the lightning to the ground; required by international standards where energisers are installed indoors; order earth stakes and connecting cable separately.

CODE

P164801

TWO-CIRCUIT FENCE SWITCH

To turn on and switch between two fence systems with one switch. Four positions are possible:
"0": both fences are turned off.
"I": Fence 1 is turned on.
"II": Fence 2 is turned on.
"I+II": both fences are turned on.

PACK TYPE

Hanging Card

CODE

P160702

WARNING SIGN

"Caution: Electric Fence"

International standards require that warning signs be placed at clearly visible points 50 m apart, at junctions with byways, as well as at points where the existence of an electric fence would not be expected. Plastic, printed on both sides.

CODE

P160003

CUTOUT SWITCH

For switching the current on and off independently of the energiser, and for switching individual paddocks on or off.

PACK TYPE

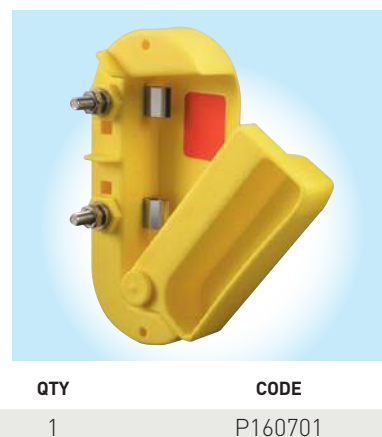

Hanging Card

CODE

P160701

Cables and Connectors

Practical tip:

Never use domestic copper cables for connection in the electric fence area. Electrochemical corrosion takes place between copper and steel fence wires, which eats into the connection and impedes the current flow. Apart from that, such cables are not cleared for high voltage.

ELECTRICAL CONNECTIONS

On electric fence we differentiate in principle between two types of connection:

- The cross-connection between two wires
- The in-line connection of the wire itself

The cross-connection is purely an electrical connection, and should have no tension associated with it. All electrical cross-connections on an electric fence should be carried out by means of galvanised, non-rusting screws. Cross-connections of all fence wires should be carried out every 200 to 400 m.

Underground cable and lead-out cable

PATURA high-voltage electric fence cable is double insulated and high voltage safe to over 10,000 volts. It can be used for over- and underground lead-outs, for the connection of earth stakes and for carrying current past gates. For distances up to 50 m the 1.6 mm diameter version is sufficient. For distances over 50 m the strong, high conductivity 2.5 mm cable should be used.

POLYWIRE JOINER

Galvanised; for secure connection of all electric fence polywires up to 2.5 mm. This product can also be used to join high voltage cable above ground.

PACK TYPE	QTY	CODE
Hanging Card	5	P160505

JOINT SCREW

Hot-dip galvanised; for the electrical cross-connection of several wires or for the connection of electric fence cable at the fence.

PACK TYPE	QTY	CODE
Hanging Card	5	P169605
Packet	25	P169625

HIGH VOLTAGE CABLE 1.6MM (LEAD OUT)

High voltage, double insulated, single-core cable with 1.6 mm steel core; for fence and earth leadouts up to 50 m, or for by-passing gates; resistance 0.1 ohms/m.

LENGTH	CODE
10 m coil	P160910
25 m coil	P160925
50 m coil	P160950
100 m coil	P160960

HIGH VOLTAGE CABLE 2.5 MM (UNDERGROUND)

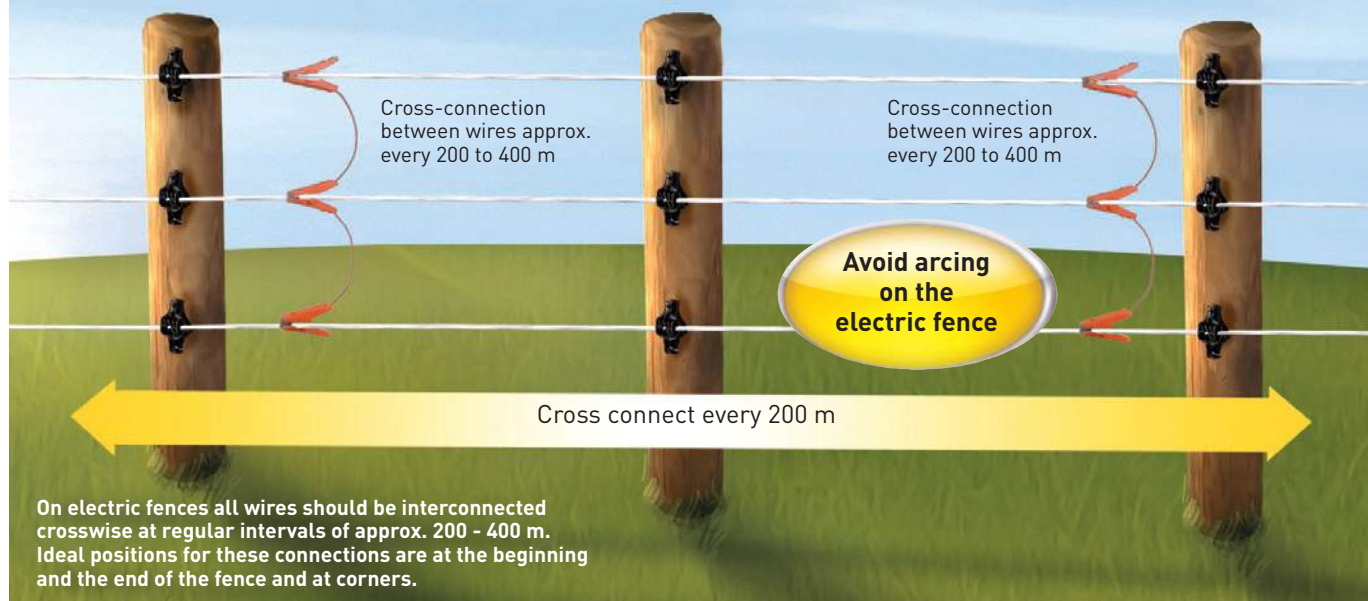

High voltage, double insulated, single-core cable with 2.5 mm steel core; for fence and earth leadouts over 50 m; resistance 0.035 ohms/m.

LENGTH	CODE
50 m coil	P161050
100 m coil	P161060
200 m coil	P161070

Making The Right Connections

Practical tip:

All connection cables should be positioned right next to a post to prevent the wires from sagging.

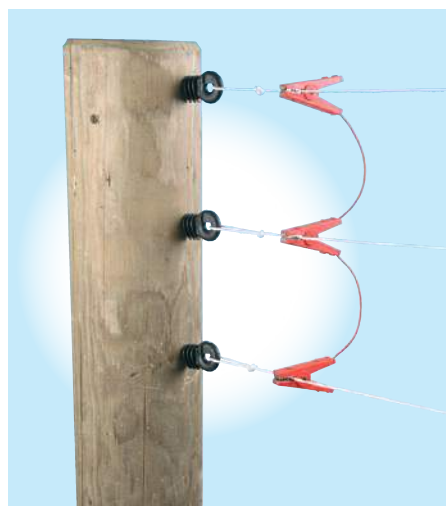

Connection cable

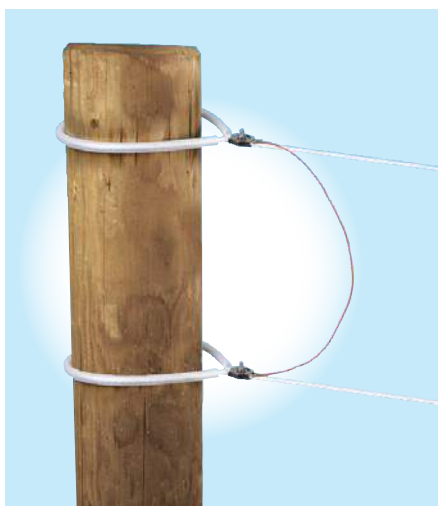

The electrical connections on an electric fence take on a special meaning. A bad connection can mean that there is no trace of a shock beyond the connection – or only a very reduced one. All connections on an electric fence must have tight contact. Only stainless steel clamps should be used. Any rust at a connection acts as an insulator, that is, the current flow is impeded and the fence voltage drops.

REGARDLESS WHETHER POLYWIRE, POLYROPE OR POLYTAPE - PATURA ALWAYS OFFERS THE SUITABLE CONNECTION CABLE

For each fence wire material we offer the proper connection technology. All connections must be implemented with high contact pressure. This is ensured with springs or clamping screws. The use of stainless steel PATURA cables ensures permanent conductive connections.

Fence connection cable with spring-loaded clamps (SS) provides optimum cross-connections for temporary polywire fences.

Fence connection cable - polyrope - with (SS) polyrope clamp provides optimum cross-connections for temporary polyrope fences.

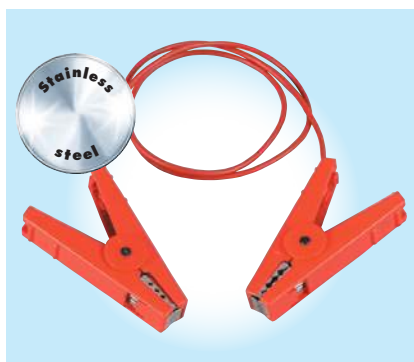

Fence connection cable - polytape - with (SS) connector plates provides optimum cross-connections for temporary polytape fences.

Cables and Inter-connectors

FENCE CONNECTING CABLE

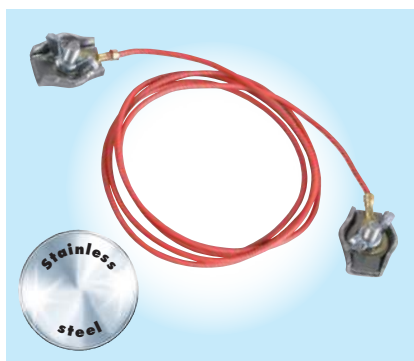

With insulated spring clamps and stainless steel contacts; for quick wire connection with multi-wire temporary fences

DESCRIPTION	PACK TYPE	CODE
2-wire	Hanging card	P101102
3-wire	Hanging card	P101202

FENCE CONNECTING CABLE FOR ROPE

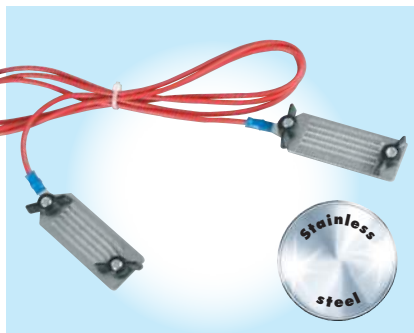

With 2 stainless steel polyrope clamps; for ropes up to 6 mm; for establishing cross-connections on polyrope fences

PACK TYPE	CODE
Hanging card	P101401

FENCE CONNECTING CABLE

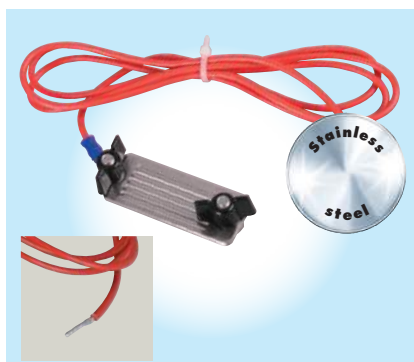

Polytape
Stainless steel; for tapes up to 40mm; rapid inter-connection for multi-wire polytape fences
