# AIMING to CHANGE THE GAME

Abracs specialise in ultimate performance, expert quality Diamond Blade design and manufacture. We have a comprehensive range of innovative Diamond Blade solutions for all industrial & construction market needs. Developed with over 25 years market expertise.

With over 25 years experience in the marketplace, excellent service has always been a top priority for the Abracs team. We've built a reputation as professionals who live in the "real world" and being tuned in to our customers practical needs is one of the key elements that has contributed to our success for so long.

Abracs are known in the UK for our quality products offering professional performance and lasting quality whilst also being very user friendly. We understand that producing top quality products is not the only important thing in our business. It is important to get all of the hard work and product development that goes into our products across to the customer.

We have a comprehensive distributor support package that is designed to communicate what makes Abracs the best as well as important features and unique selling points of our Abracs branded products.

Thank you very much for your interest in Abracs, we are looking forward to working in close partnership with both you and your business.

*Rob Jeffery*

Managing Director

# WHY CHOOSE ABRACS?

## QUALITY

Our Diamond products are manufactured to the highest standards & are designed specifically for professionals. Our comprehensive Diamond Blade range is Abracs Quality assured, guaranteeing you excellence at all times.

## HISTORY

Established in 1989. We have built a solid reputation for over 25 years for servicing the industrial and construction market.

## PERFORMANCE

International recognition for first class product performance. Customers enjoy a high return on their investment through speed, life, strength and value.

## SERVICE & SUPPORT

York based headquarters with over £1 million worth of stock holding and next day delivery nationwide as standard. Complete sales, marketing, products in-store and end user support available to our distributors.

## RANGE

Comprehensive cross section of Diamond Blades to cater for all applications and market needs, price and performance levels for every professional user.

## ACCREDITATIONS

Recognition and approval with various world renowned governing bodies as proof of our product safety, quality control, design and manufacture.

# MANUFACTURING EXPERTISE

Abracs precision manufacture and modern quality control methods allow us to control and regulate the variables that affect blade life, quality of cut and surface finish.

## ① THE DIAMOND

Every Abracs Diamond Blade is tipped with premium quality synthetic diamond impregnated into metal bonded segments.

## ② SEGMENT

The varying strength of the bond matrix in the segment determines the type of materials to cut.

## ③ GULLET

The gullets improve air flow which in turn dissipates heat and remove slurry from the cut.

## ④ LASER WELDED

The laser welded segment improves strength and durability on certain blade types.

## ⑤ DIAMOND PLACEMENT

The bottom 1.5-2mm on blades which are laser welded (known as free backing) does not contain diamonds as this adversely affects the laser weld.

## ⑥ STEEL CORE

Tensioned steel core made of high alloy, heat treated laminated steel and reinforced for additional strength.

## ⑦ COOLING HOLES

Added visibility when cutting, and ensures heat dispersion and swarf removal for maximum yield out.

## ⑧ CENTRE BORE

Varying bore sizes are produced for our high performance blades to fit different machine types.

## RADIAL DIAMOND TECHNOLOGY

Brand new technology incorporated into a unique range of diamond blades from Abracs. We utilize a unique radial profile for broader surface area on the cutting edge of the blade for more diamond exposure, and for a longer lifespan of the product.

Our diamond blade placement is not limited to only the outer edges or corners of the blade as this would lead to faster degradation of the diamonds and essentially, a shorter life span of the blade.

# QUALITY SYSTEM

## EXPERT★★★★★

EXPERT-line products offer expert users the best quality blade with maximum product benefits, reliability and an optimum price-performance ratio.

## PRO★★★★☆

PRO-line products have been designed for high quality demands and frequent use in industry and trades. They offer a great price-performance ratio and a high efficiency.

## TRADE★★★★☆

TRADE-line products are reliable diamond tools with an attractive price-performance ratio for the price-conscious expert.

# MARKING SYSTEM

Abracs Diamond Blade range is suitable for all construction materials applications, in sizes from 115mm to 500mm for use with all applicable machine types.

All Abracs Diamond Blades conform to the highest European safety standard, EN 13236, which ensures that all products are manufactured and tested to the highest quality.

# DIAMOND BLADE TERMINOLOGY

## COOLING HOLES

Added visibility when cutting, and ensures heat dispersion and swarf removal for maximum yield out.

## CONTINUOUS TURBO RIM

The castellation of the blade traps air in motion guaranteeing less chipping and faster cuts.

## ANGLED TURBO SEGMENT

The angled turbo segment easily removes debris and helps cool the blade more efficiently.

## ABRACS UNIQUE TECHNOLOGY AND SAFETY STANDARDS INCORPORATED INTO YOUR PRODUCT.

### SAFETY GUARANTEE

Manufactured to European safety standards.

### LONG LASTING

Manufactured to the highest standards for maximum durability.

### COOLING HOLES

Increased performance and visibility.

### ANGLED SEGMENT

More usable segment for increased blade life-span.

### ENGINEERED CORE

Less flex, increased rigidity.

### LASER WELDED

Laser welded segments ensure maximum strength performance and reliability.

### UNDERCUT TECHNOLOGY

Removes material from the cutting area to protect core.

### KEYHOLE GULETS

Ensures less chipping of the material being cut and reduces vibration levels.

### NARROW GULLET

Similar to keyhole gullets, narrow gullets ensures less chipping of the material being cut and reduces vibration levels.

### UNDERCUT TECHNOLOGY

Specific segment design "undercut technology" increases water flow and protects the segments from increased wear.

## DIAMOND BLADE UNIQUE SELLING POINTS FOR EASE OF SELECTION.

### 10MM DIAMOND SEGMENT

A robust 10MM segment height can give an increased life of up to 43% over 7mm segments.

### 10MM TURBO SEGMENT

Turbo Segments extend the life of a blade by removing slurry quickly and with less surface area cuts are fast and clean.

### 10MM TURBO SEGMENT CONTINUOUS RIM

Continuous rim blades cut clean and smooth and eliminate the chance of segment loss.

### FEROCIOUS SPEED

Guaranteed to offer a fast and effective cut that meets and surpasses safety and vibration standards.

### EXTENDED PERFORMANCE

Blade offers good service life and safety for the price conscious buyer.

### MAXIMUM PERFORMANCE

Blade is suitable for high quality demands and frequent use in industrial settings.

### ULTIMATE PERFORMANCE

Blades offer the best performance, lifetime and lowest vibration in product class.

### PREMIUM DIAMOND QUALITY

Blade uses the best synthetic diamond composition for speed, versatility, strength and endurance.

# PRODUCT RANGE

## GENERAL CONSTRUCTION MATERIALS

These blades are designed to provide aggressive, fast, and tough cutting of a large variety of advanced and composite general construction materials.

## DUAL CONSTRUCTION MATERIALS

This range has been designed specifically to accommodate the benefits of having one blade for two material types (General Construction and Abrasive Construction).

## HARD CONSTRUCTION MATERIALS

Our hard materials range is manufactured using a soft bond which is crucial to effectively cut hard materials such as granite.

## 3 EASY STEPS TO CHOOSING THE RIGHT PRODUCT

### STEP 1

Choose a material you wish to cut

### STEP 2

Select quality level of the blade

### STEP 3

Select the blade size or the operational machine

## ABRASIVE CONSTRUCTION MATERIALS

The Abrasive Construction Materials range is designed specifically for asphalt, green concrete and other abrasive materials.

## UNIVERSAL CONSTRUCTION MATERIALS

The ideal blade for cutting a wide variety of different materials, no need to change this blade for new applications. The all in one.

# DEALER SUPPORT

As one of the most trusted and recognised brands in the industry we are dedicated to providing our distributors with solutions to sell. When you need support, you'll never have to ask twice. We pride ourselves on our product quality, unbeatable customer service and comprehensive marketing packages.

## HOW WE CAN HELP YOU SELL

- UK Stockholding
- Next Day Delivery
- Major Promotional Calendar
- National Advertising
- Merchandising
- Point Of Sale Displays
- Trade Show Support
- Sales Aids
- Bespoke Marketing
- Leads and Referrals

### NEXT DAY DELIVERY

We offer next day delivery as standard. All stock is kept at our distribution head office in York.

### HEALTHY PROFIT MARGINS

We've built up a network of loyal distributors who have enjoyed consistent financial returns.

### EXPERT KNOWLEDGE

Should you need any face-to-face advice or technical support we can have an expert advisor at your premises or on site usually within 24 hours.

### MARKET LEADING PRODUCTS

Access a comprehensive selection of professional grade abrasive products ready for industrial level tolerances.

### BRAND STRENGTH

Continuously evolving marketing with an active promotions calendar to stay ahead of the competition.

### MERCHANDISE

Fantastic artwork, display stands and promotional merchandise available exclusively to Abracs distributors.

### PERSONAL ACCOUNT TEAM

Your dedicated account management team will work closely with your organisation at stock delivery and sales support level to ensure that you are receiving an excellent level of service.

### OUR DISTRIBUTOR SUPPORT PACKAGE

All you need to grow your business. Quality assured products, comprehensive support, unrivalled choice.

# SALES SUPPORT

## MORE PROFIT AT THE POINT OF SALE

Exclusive merchandising solutions enable professional presentation of our high value quality diamond tools across small and large sales spaces. Distinctive packaging makes the journey to purchase much clearer and easier for customers to find the right product.

# SAFETY

Abracs Diamond Blades meet all the requirements of national and international standards and guidelines. Our quality management system is certified according to EN ISO 9001 and thus guarantees compliance with all regulations. Abracs diamond blades are suitable for wet and dry cutting, however we advise that all materials are cut wet in-line with health and safety regulations.

## THE SAFE USE OF DIAMOND CUTTING BLADES

It is very important to always comply with all safety and accident prevention regulations when using diamond cutting blades.

All Abracs blades are marked with the appropriate safety information pictograms.

**Always** observe  
ALL safety  
instructions

**Always** wear  
ear protection

**Always** wear  
a dust mask

**Always** wear  
safety goggles  
or glasses

**Always** wear  
safety gloves

### ⚠ **BEFORE USING YOUR MACHINE ALWAYS CHECK:**

- The machine is in good, safe condition & complies with all safety requirements
- All guards are undamaged & in place
- The flanges are of equal size & free from burrs

### ⚠ **ALWAYS CHECK THAT THE BLADE:**

- Is free from cracks & damage
- Is the correct blade for the application
- Has the correct bore size
- Has the correct peripheral speed for the machine it is to be used on
- Is mounted correctly with the directional arrow pointing the right way

### ⚠ **ALWAYS ENSURE THAT THE WORK AREA:**

- Is clean & free from obstructions & the material to be cut is secure
- Has barriers or warning signs in places

### ⚠ **WHEN CUTTING ALWAYS:**

- Start & run the machine to check for smooth running
- Place the blade into the material, the weight of the machine is adequate pressure
- Cut with a slow sawing or reciprocating motion, do not turn or twist the blade in the cut
- Use several passes to cut to the required depth, do not drop the blade to its full depth in one go
- Periodically remove the blade from the cut & continue to rotate & "air cool" for several seconds if dry cutting
- If wet cutting, ensure optimum water supply

# FAQs & TROUBLESHOOTING

Abracs has prepared this guide to help you find, identify and resolve the problems which you may encounter with diamond saw blades.

## CORE CRACKS

- Blade is too hard for the material being cut
- High-level infed causes extreme pressure and metal fatigue
- Excessive speed of rotation

## OVALISED BORE HOLE

- Blade shaft bearing may possibly be worn. Fit new bearing and ensure regular lubrication
- Blade too hard for the material being cut, this will result in the blade hammering and wearing out of round. Choose a blade with a softer bond system
- Machine spindle may have groove scored in it as result of previous blade slipping on spindle

## CRACKED SEGMENT

- Blade is too hard for the material being cut
- Cutting speed is too fast

## UNEVEN SEGMENT WEAR

- Poor blade alignment and/or inadequate cooling
- Poor bearings, a worn spindle, dirty or damaged flanges or even excessive baulking

## OVERHEATING

Most common cause of blade failure:

- Low quality and poor distribution of cooling water
- Poor blade selection for the material being cut
- Excessive cutting speed

## UNDERCUTTING

Premature wear of the steel core:

- Offset segments can assist removal of the slurry from the cut
- Make sure that the blade is not cutting below the asphalt into the sub base.
- Make sure that the water supply is sufficient

## TENSION LOSS

- Blade core overheated. For wet cut blades ensure sufficient water supply
- Check machine is running at correct rpm
- The blade can deviate if it is too hard for the application
- Ensure that the blade is not spinning on the spindle and that it is secure
- Ensure that the blade is cutting in straight lines only

## BLADE NOT CUTTING

- The blade is too hard for the material being cut
- Output power is too low to allow the blade to cut
- The blade has become too smooth due to excessive speed of cutting
- Check direction of rotation

## EXCESSIVE WEAR

- Incorrect blade usage e.g. a tile-cutting blade used on a concrete block
- Insufficient blade cooling
- Ovalised bore hole
- Cutting speed is too fast
- Spindle is rotating too slowly

# MORE THAN DIAMOND TOOLS

## CUTTING & GRINDING DISCS

Cutting, grinding and extra thin discs are available. Discs available for use on virtually all materials and applications.

## FLAP DISCS

Manufactured using premium quality materials and sturdy fibre backing for extreme versatility.

## HOLE SAWS

Ideal for the professional tradesmen, Abracs Hole Saws are available as a 10pc or 15pc kits.

## HYBRID DISCS

Hugely popular and versatile discs that can cut and grind many materials.

## JIGSAW BLADES

Covering a broad spectrum of material applications for wood, metal and aluminium.

# HUGE RANGE

Abracs offer one of the widest ranges of abrasives, accessories and allied products in the market. Whatever your requirement, our broad range of products means we are a one-stop-shop.

## WIRE BRUSHES

Abracs supplies more than 20 different types of wire brushes to cover almost every application.

## COATED ABRASIVES

Comprehensive range of Coated Abrasives, from Emery Rolls & Sheets, Sanding Belts and more.

## SPINDLE MOUNTED WHEELS

An extensive range of sizes and types available in aluminium oxide, non-woven and an interleaved version.

## POLY PRODUCTS & FIBRE DISCS

Abracs stock a range of poly products designed for the removal of rust, paint and thermal blueing.

## QUICK-LOCK PRODUCTS

Can be used for cleaning, deburring, stripping, finishing and polishing metal.

## ACCESSORIES & MULTI-PACKS

Our Accessories and Multi-Packs include many of our most popular products inside handy display packaging.
