#### ABBV1 & ABBV1ST

REGULATE THE HEATING SYSTEM DIFFERENTIAL PRESSURE

HIGH CAPACITY FLOW UP TO 50 LITRES PER MINUTE

**DIFFERENTIAL PRESSURE RANGE 0.1 TO 0.6 BAR** 

22MM COMPRESSION FITTING

The Tower ABBV1 or ABBV1ST should be fitted where a boiler bypass is required. Typically this is the case when a system is equipped with thermostatic radiator valves (TRV's), and to allow pump overrun operation after zone valves have closed down.

TRV's slowly close down as each radiator raises the room temperature. To overcome Flow restriction as TRV's close down, the ABBV1 is adjusted to the required set point.

As the system resistance increases due to TRV's closing, the ABBV1 or ABBV1ST allows flow to Increase in order to maintain the required pre-set system differential pressure . The regulation provided will reduce system noise that can result from TRV's or zone valves closing, eliminate pump impeller wear that can result from high flow resistance and enhance the life of the boiler's heat exchanger by ensuring minimum flow rate at all times.

Installation should be in a loop between flow and return after the pump. Ensure that the flow is in the direction of the arrow on the ABBV1 or ABBV1ST body. Rotate the adjustment head until the required setting number is visible, and lock the valve at that point by tightening the screw on top of the adjuster. Refer to recommendations in the boiler instructions and the pressure /flow rates detailed below to decide which setting is required.

#### Specification:

- High capacity flow up to 50 litres per minute
- Maintains an even system pressure
- Wide differential pressure range 0.1 bar to 0.6 bar
- 22mm Compression fittings •

- Constant flow through boiler
- Lockable set pressure

- Reduces system noise
  - ∆P Kpa PSI 11.60 80 10.15 6 8.70 7.25 5.80 4.35 2.90 1.45

# ABBV1 & ST AUTOMATIC BYPASS VALVE - 22mm
